ENVIRONMENTAL MANAGEMENT

0680/42

Alternative to Coursework

February/March 2015 1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

Study the appropriate source materials before you start to write your answers.

Credit will be given for appropriate selection and use of data in your answers and for relevant interpretation of these data. Suggestions for data sources are given in some questions.

You may use the source data to draw diagrams and graphs or to do calculations to illustrate your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

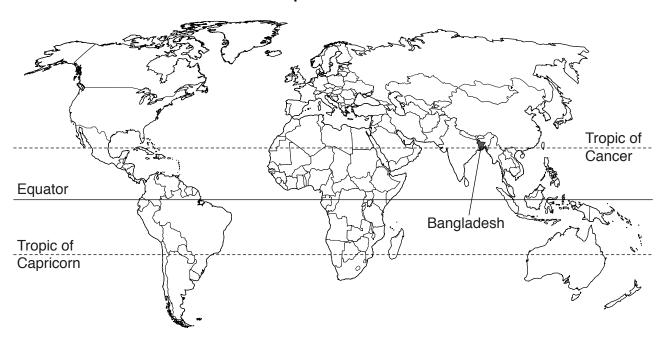

This document consists of 14 printed pages and 2 blank pages.

map of the world

map of Bangladesh

Area of Bangladesh: 144 000 sq km

Population: 164 million

Children per woman: 2.5

Life expectancy: 70 years

Currency: Taka (85 BDT = 1 US\$)

Language: Bangla, English

Climate: tropical

Terrain: mainly flat low-lying plain, hilly in south east

Main exports: clothing, agricultural products, frozen seafood, jute and leather

a)	Des	scribe the effec	ets of cyclones on	coastal communities.

- (iii) The population of Dhaka continues to increase and building materials are always in demand. Bangladesh has about six thousand brick factories that continually supply new bricks. The process of brick making is shown below.
 - · mud is dug out of the ground
 - the mud is placed in a mould
 - the moulded brick is turned out to air dry
 - air-dried bricks are stacked in a kiln
 - the kiln is heated by burning coal to harden (fire) the bricks
 - the finished bricks are stacked for delivery

Each brick factory has a small labour force that lives near the kiln. Bricks can only be made for five months of the year. A weather station near some brick factories recorded the following data.

month	J	F	М	Α	М	J	J	Α	S	0	N	D
average temperature/°C	25	28	33	35	34	32	31	31	31	31	29	26

	•••••	 •••••									•••••		

[2]

(d)	(i)	About half of the six thousand brick factories use coal as the source of energy to make bricks. Suggest the possible environmental problems caused by burning coal.
		[3]
	(ii)	Explain, using the map information on page 2, why the factories have a sustainable supply of mud for making bricks.

(e) Most of the bricks are taken by truck to building sites in Dhaka. New buildings start with a steel and concrete frame. Each section of the frame is then filled in with brickwork.

(i)	Bricklayers use the rule of 50 bricks per square metre when building walls. How many bricks are needed to completely fill the shaded section shown in the diagram?
	Space for working.
	[1]
(ii)	How many bricks are needed to complete four sections of wall?
	Space for working.
	[1]
(iii)	Suggest why bricklayers usually order 10 percent more bricks than the minimum needed
()	to complete a wall.
	[1]
Tho	
	government does not want bricks to be imported from other countries. Suggest reasons the government takes this view.
	[3]

	Fieselit	the information froi	m the notebook in a	suitable table in th	e space below.
(iii)			e water drained more		

The students found out more information about the maximum depth of flooding in six districts of Dhaka.

district	Р	Q	R	S	Т	U
maximum depth of flooding/cm	55	40	19	25	20	33

(iv) Plot the data as a graph in the grid below.

(v) S	Suggest what the results indicate about a pattern of flooding depth.	

[4]

(b) Dhaka has many lakes, called khals, to collect water draining from the streets.

(i)	Suggest which of the districts P–U is nearest to this khal.
	[1]
(ii)	The students noticed that this khal had bubbles of pumped air on the surface of the water. Explain how this pumped air prevents the collapse of this ecosystem.
	[4]

(c) To find out about different views on the causes of flooding, the students carried out a survey of different groups of people. They interviewed a total of 100 people using a questionnaire. The question the students asked was, 'Which of the following do you consider to be a major cause of flooding? You may select more than one response.'

The results are shown below.

Which of the following is a major cause of flooding?	number of yes responses /%
very high rainfall	74
population growth and unplanned development	95
poor waste management	82
reduction of khal size	82
poor drainage system	83
lack of regulations	45

(1)	Suggest four groups of people the students could have interviewed.
	[2
(ii)	Suggest why the students decided to select equal numbers of each group of people to interview.
	[1

The city authorities are investing more money in strategies to limit the problems caused by flooding in Dhaka. Suggest two strategies the city authorities could invest in to help reduce flooding in the future.
