#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

Where a numerical value is necessary, take the acceleration due to gravity to be  $10 \text{ m s}^{-2}$ .

The use of a calculator is expected, where appropriate.

Results obtained solely from a graphic calculator, without supporting working or reasoning, will not receive credit.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

	od of the motion is $\frac{1}{2}\pi$ s. Find the speed of P when it is 2 m from B.

A uniform disc, of radius a and mass 2M, is attached to a thin uniform rod AB of length 6a and mass M. The rod lies along a diameter of the disc, so that the centre of the disc is a distance x from A (see diagram).

(i)	Find the moment of inertia of the object, consisting of disc and rod, about a fixed horizontal axis $l$ through $A$ and perpendicular to the plane of the disc. [4]

The object is free to rotate about the axis l. The object is held with AB horizontal and is released from rest. When AB makes an angle  $\theta$  with the vertical, where  $\cos \theta = \frac{3}{5}$ , the angular speed of the object is  $\sqrt{\left(\frac{2g}{5a}\right)}$ .

(ii)	Find the possible values of $x$ .	[5]

4

A uniform rod AB of length 4a and weight W is smoothly hinged to a vertical wall at the end A. The

11 Answer only **one** of the following two alternatives.

#### **EITHER**

A particle P of mass m is free to move on the smooth inner surface of a fixed hollow sphere of radius a. The centre of the sphere is O and the point C is on the inner surface of the sphere, vertically below O. The points A and B on the inner surface of the sphere are the ends of a diameter of the sphere. The diameter AOB makes an acute angle  $\alpha$  with the vertical, where  $\cos \alpha = \frac{4}{5}$ , with A below the horizontal level of B. The particle is projected from A with speed u, and moves along the inner surface of the sphere towards C. The normal reaction forces on the particle at A and C are in the ratio 8:9.

(i)	Show that $u^2 = 4ag$ .	[6]

 •••••
•••••
 ,
•••••

#### OR

A machine is used to produce metal rods. When the machine is working efficiently, the lengths,  $x \, \text{cm}$ , of the rods have a normal distribution with mean 150 cm and standard deviation 1.2 cm. The machine is checked regularly by taking random samples of 200 rods. The latest results are shown in the following table.

Interval	$146 \leqslant x < 147$	$147 \leqslant x < 148$	$148 \leqslant x < 149$	$149 \leqslant x < 150$
Observed frequency	1	2	23	52
	150 ≤ <i>x</i> < 151	151 ≤ <i>x</i> < 152	152 ≤ <i>x</i> < 153	153 ≤ <i>x</i> < 154
	69	36	15	2

As a first check, the sample is used to calculate an estimate for the mean.

(i)	Show that an estimate for the mean from this sample is close to 150 cm.				
		•••••			

As a second check, the results are tested for goodness of fit of the normal distribution with mean 150 cm and standard deviation 1.2 cm. The relevant expected frequencies, found using the normal distribution function given in the List of Formulae (MF10), are shown in the following table.

Interval	<i>x</i> < 147	$147 \leqslant x < 148$	$148 \leqslant x < 149$	$149 \leqslant x < 150$	
Observed frequency	1	2	23	52	
Expected frequency	1.24	8.32	30.94	59.50	
	150 ≤ <i>x</i> < 151	151 ≤ <i>x</i> < 152	152 ≤ <i>x</i> < 153	153 ≤ <i>x</i>	
	69	36	15	2	
	59.50	30.94	8.32	1.24	

(ii)	Show how the expected frequency for $151 \le x < 152$ is obtained.	[3]
