#### **ENVIRONMENTAL MANAGEMENT**

0680/23

Paper 2

October/November 2013

1 hour 45 minutes

Candidates answer on the Question Paper.

Additional Materials: Ruler

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer both questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

**(c)** The graphs below show information from a textbook. Look at the top graph which shows the percentage contributions of the four main greenhouse gases. Below it, the graph shows estimates from one source for the number of years that each gas remains in the atmosphere.

For Examiner's Use

#### percentage contributions to the greenhouse effect

#### number of years gases remain in the atmosphere

(i) According to this data, how many times longer do CFCs remain in the atmosphere than CO<sub>2</sub>?

.....[1]

(ii)

| Use values from these graphs to explain why  | For<br>Examiner's |
|--|-------------------|
| 1 CO <sub>2</sub> is considered to be the main greenhouse gas;   | Use               |
|  |                   |
|  |                   |
|  |                   |
|  |                   |
| the importance of CFCs to the greenhouse effect might be greater than their percentage contribution would suggest. |                   |
|  |                   |
| [4]  |                   |

(d) (i) Some of the human sources of greenhouse gases in the atmosphere are shown below.

For Examiner's Use

| factories burning foss | il fuels<br>car engines running | <b>crop farm</b><br>g on petrol | ning using chemical fertilisers  |
|------------------------|---------------------------------|---------------------------------|----------------------------------|
| refrigeration and      |                                 |                                 | livestock farmers keeping cattle |
| exhaust emiss          | ions from old truck             | s and buses                     | use of aerosol sprays            |

Fill in the table to show sources for the different greenhouse gases. Use each source once only.

| greenhouse gas   | human source |
|------------------|--------------|
| CO <sub>2</sub>  |              |
|                  |              |
|                  |              |
| methane          |              |
|                  |              |
|                  |              |
| CFCs             |              |
|                  |              |
|                  |              |
| N <sub>2</sub> O |              |
|                  |              |
|                  |              |

[3]

- (ii) Another human source of greenhouse gas emissions can be described as follows,
  - results in the release of CO<sub>2</sub>, some methane and N<sub>2</sub>O,
  - associated with change from natural to urban or agricultural land use.

Suggest the name of this source of greenhouse gas emissions.

| source | 1 | ] |
|--------|---|---|
|        |   |   |

For Examiner's Use

| (iii) | Looking at all of these sources suggests that people in every country of the world, whether rich or poor, contribute to the release of greenhouse gases. |  |  |  |  |
|-------|--|--|--|--|--|
|       | How true is this statement? Explain your view as fully as you can.   |  |  |  |  |
|       |  |  |  |  |  |
|       |  |  |  |  |  |
|       |  |  |  |  |  |
|       |  |  |  |  |  |

|       |  |  |  |  |  |
|       |  |  |  |  |  |
|       | [4]  |  |  |  |  |
| (iv)  | CFCs are the main cause of the ozone hole in the upper atmosphere over Antarctica.   |  |  |  |  |
|       | Explain why the hole in the ozone layer does not increase global warming.  |  |  |  |  |
|       |  |  |  |  |  |
|       |  |  |  |  |  |
|       |  |  |  |  |  |
|       | [2]  |  |  |  |  |
| (v)   | Why are people concerned about damage to the ozone layer?  |  |  |  |  |
|       |  |  |  |  |  |
|       |  |  |  |  |  |
|       | [2]  |  |  |  |  |

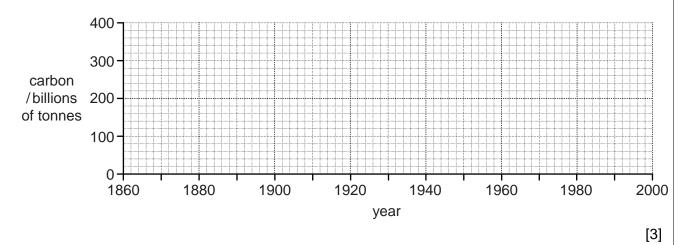

**(e)** The table gives the amount of carbon emitted into the atmosphere in carbon dioxide from 1860 to 2000.

For Examiner's Use

These are cumulative totals (new amounts released each year have been added to those already there).

| year | carbon / billions of tonnes |
|------|-----------------------------|
| 1860 | 40                          |
| 1880 | 50                          |
| 1900 | 60                          |
| 1920 | 90                          |
| 1940 | 130                         |
| 1960 | 180                         |
| 1980 | 270                         |
| 2000 | 380                         |

(i) On the grid, draw a line graph to show the amount of carbon emitted from 1860 to 2000.

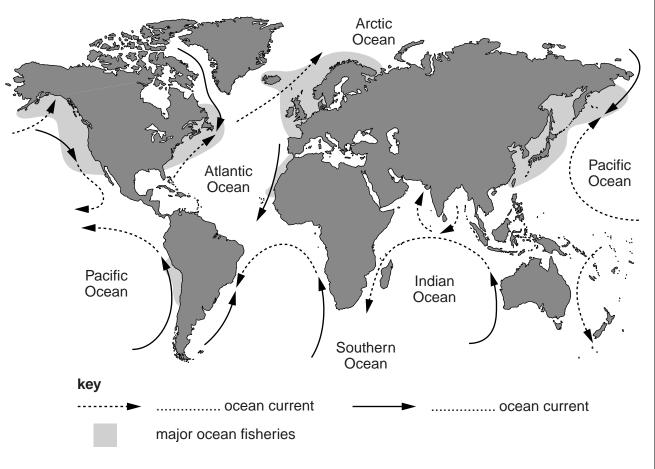

| (11) | emissions fron |      | tnings | tnat | tne | grapn | snows | about | carbon |
|------|----------------|------|--------|------|-----|-------|-------|-------|--------|

|      |                | <br> |        |      |     |       |       |       |        |

International attempts to limit carbon dioxide emissions have included meetings

between countries in Kyoto in 1997, Copenhagen in 2009 and Cancun in Mexico in 2010. They have had only limited success. Give reasons why international action to reduce carbon dioxide emissions has been much slower than many environmental groups would have liked. World sea levels are rising as a result of global climate change. They are 18 cm higher than 100 years ago. Why are some countries more worried about rising sea levels than others? Refer to examples of countries when explaining your answer. [Total: 40]

For Examiner's Use **2 (a)** Look at the map showing where some of the world's ocean currents flow. Also shown are the locations of the major ocean fisheries.

For Examiner's Use

(i) Complete the key on the map for warm and cold ocean currents.

Write your answers in the spaces in the key. [1]

(ii) On the map, name **two** of the ocean currents shown, **one warm** current and **one cold** current.

Put the names of the two currents on the map. [2]

(iii) Use the letters **A** and **B** to mark on the map the two examples of major fisheries located where warm and cold ocean currents meet.

Put the letters **A** and **B** on the map. [1]

(e) Read this newspaper report from June 2011.

For Examiner's Use

## Save our fish stocks – eat more sardines

If you want to help save the world's fish stocks of cod and tuna, eat sardines and herrings instead.

Numbers of small fish, like sardines, herrings, anchovies and sprats have more than doubled.

Scientists have found that in the last 40 years there has been a big decline in large predator fish – cod, tuna and sharks, due to overfishing.

By removing the large predatory species, small fishes that feed on plankton have been left to thrive and increase in numbers.

(i) Draw a diagram in the space below to show the ocean food chain that is being described in the newspaper report.

[3]

| (ii) | Suggest whether people eating more sardines could lead to an increase in some of the other fish stocks, as the newspaper report says? Explain your view. |
