### **ENVIRONMENTAL MANAGEMENT**

5014/21

Alternative to Coursework

October/November 2013

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials: Ruler

### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

Study the appropriate source materials before you start to write your answers.

Credit will be given for appropriate selection and use of data in your answers and for relevant interpretation of these data. Suggestions for data sources are given in some questions.

You may use the source data to draw diagrams and graphs or to do calculations to illustrate your answers.

At the end of the examination, fasten all your work securely together.

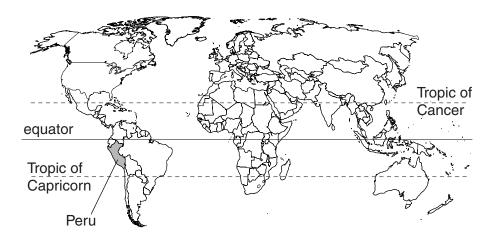

The number of marks is given in brackets [ ] at the end of each question or part question.

# world map

## map of Peru

Area of Peru: 1285216sqkm

Population: 30 million

Children per woman: 2.6

Life expectancy: 74 years

Currency: soles (2.9 = 1US\$)

Language: Spanish, indigenous languages

Climate: driest in the west, cold mountains in the centre, equatorial in the east

Terrain: western coastal plain, high Andes mountains in the centre, eastern lowlands in the Amazon

Basin

Main exports: minerals, such as copper, gold, zinc and many others, fishmeal and agricultural produce.

Peru is a developing country with large mineral resources in the Andes mountains. The coastal waters are excellent fishing grounds. Economic growth has resumed after the world recession and levels of poverty have been reduced in recent years. Peru has developed many trade links with other countries.

For Examiner's Use

| 1 (a) | Wh           | at are the advantages for Peru of imp                                       | roved trade links with other countries?  |
|-------|--------------|---|--|
|       |              |   |  |
|       |              |   |  |
|       |              |   | [2]  |
| (b)   | farr         |   | bove sea level. Many indigenous communities ities fish in the lake or carry out informal mining  |
|       | also<br>'pej | o sold in markets in local towns. To jerrey' was introduced. They are now c | o local people for many years. Some fish are increase the fish catch a new species called aught in large numbers. However, a native fish 19th, although it was common in the past. |
|       |              |   |  |
|       |              | pejerrey fish   | carache fish   |
|       | (i)          | Suggest how the introduction of new lake ecosystem.                         | w species like pejerrey could alter the natural  |
|       |              |   |  |
|       |              |   |  |
|       |              |   |  |
|       |              |   |  |
|       |              |   |  |

The pejerrey is now the main fish caught and sold in local markets. The carache fish is only used to make soup. Some people were worried that these fish were not safe to eat as a result of mining in the surrounding mountains. They asked a scientist to test fish muscle for mercury (a heavy metal).

For Examiner's Use

The scientist used the following method:

- catch fish of both species in five different locations on the lake
- visit three fish markets and buy fish of both species
- record the length of all these fish
- remove a piece of muscle tissue of the same size from just behind the gills of each fish
- pack the muscle samples in ice and send to the laboratory

| (ii)  | Suggest why the scientist collected fish from three markets as well as catching fish. |
|-------|---|
|       | [1]   |
| (iii) | Why did the scientist pack the muscle samples in ice?                                 |
|       | [1]   |

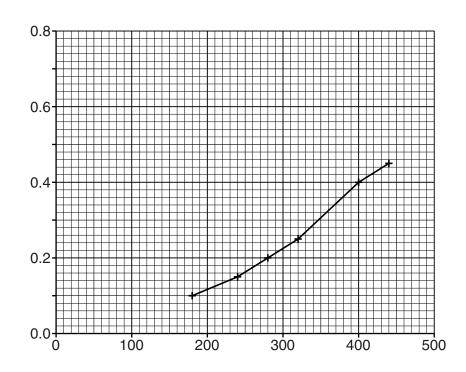

(iv) The average (mean) results for analysis of the fish of differing lengths are shown in the table below.

For Examiner's Use

| pejerr    | ey fish   |
|-----------|---|
| length/mm | average mercury<br>concentration of<br>fish/ppm |
| 180       | 0.10  |
| 240       | 0.15  |
| 280       | 0.20  |
| 320       | 0.25  |
| 400       | 0.40  |
| 440       | 0.45  |

| caracl    | ne fish                                   |
|-----------|---|
| length/mm | average mercury concentration of fish/ppm |
| 100       | 0.10                                      |
| 120       | 0.20                                      |
| 140       | 0.35                                      |
| 160       | 0.50                                      |
| 180       | 0.70                                      |

Complete the graph below by labelling the axes, plotting the results for the carache fish and completing the key.

Key
pejerrey fish
carache fish

|              | e scientist decided that this mining we caca. Explain why he came to this d   |   | entering Lake  |  |  |  |  |  |  |
|              |   |   |                |  |  |  |  |  |  |
|              |   |   | [2]            |  |  |  |  |  |  |

(d) Lake Titicaca is the habitat of many endemic species (found nowhere else in the world). One of these species, the Lake Titicaca frog, is endangered and its population is in decline.

For Examiner's Use

### life cycle of the Lake Titicaca frog

When visiting the local markets the scientist noticed that some frogs were for sale. He decided to carry out another survey of six markets to try to estimate how many frogs were being caught for sale in the area. He decided not to buy any frogs.

| ` ,  | Why did the scientist decide not to buy any frogs?                         |
|------|--|
|      | [1]  |
| (ii) | Describe how the scientist should undertake the survey to achieve his aim. |
|      |  |
|      |  |
|      |  |
|      |  |
|      | [3]  |

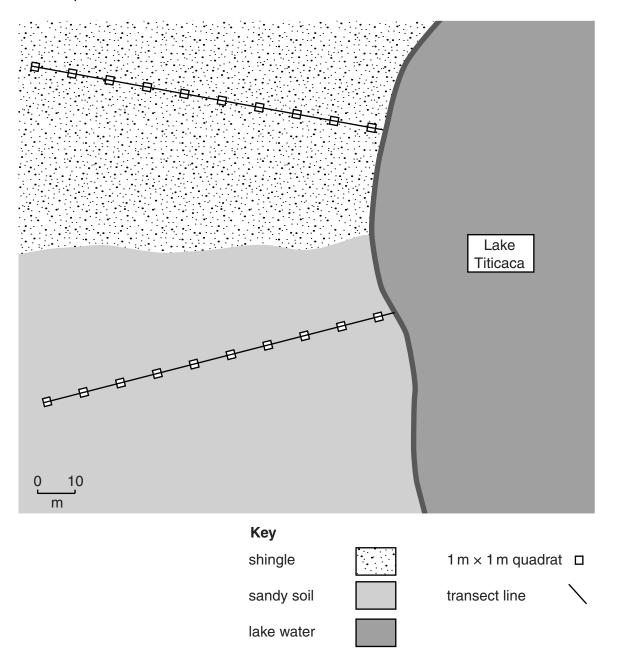

(iii) In the space below, draw a table that could be used to record the results of the survey of six markets.

For Examiner's Use

[3]

(e) Next, the scientist carried out a survey of the frogs' habitat, in the area shown on the map.

For Examiner's Use

The scientist carried out the following tasks, but not in the order given below:

edge of lake

- A collect ten  $1 \text{ m} \times 1 \text{ m}$  square quadrats
- **B** place a 40 m tape on the ground, laid out at 90° to the shoreline
- **C** count all the young and adult frogs
- **D** catch all the young and adult frogs in each quadrat
- **E** place quadrats at 4 m intervals along the tape
- F release the animals back into their habitat
- **G** take a pH reading from the soil in each quadrat

2 (a) About 120 000 people live in the city of Puno. Many of them have small businesses along the edge of the lake. Less than half the city has a daily collection of waste. This means that a large amount of waste finds its way into the lake.

For Examiner's Use

### percentage of different types of waste produced in the city

| type of waste        | percentage of total waste |
|----------------------|---------------------------|
| organic matter       | 30                        |
| plastic bags         | 13                        |
| plastic bottles      | 6                         |
| tins                 | 8                         |
| glass                | 7                         |
| pottery              | 4                         |
| shoes                | 5                         |
| iron                 | 20                        |
| other types of waste |                           |
| total                | 100                       |

| (i) | In the table, state the percentage of other types of waste. |
|-----|---|
|     | Space for working.  |

|       | Write your answer in the space in the table. [1]                              |
|-------|---|
| (ii)  | Select one type of waste from the survey and describe how it can be recycled. |
|       |   |
|       |   |
|       |   |
|       | [2]   |
| (iii) | What are the environmental advantages of recycling some waste materials?      |
|       |   |
|       |   |
|       |   |
|       | [2]   |

**(b)** Some people try to make a living collecting materials from the streets and municipal waste tips to sell.

For Examiner's Use

### flow diagram to show how selling waste is organised

|                | price/soles per kilogram       |                              |  |  |

For Examiner's Use (d) A student wanted to find out how much money waste collectors could make in a day. To make sure he interviewed each waste collector in the same way he completed a questionnaire for each interview.

For Examiner's Use

He asked them questions and then recorded the answers on this tally sheet.

| How many hours do you collect waste in one day? | 1–3     | 4–5 | 6–7     | 8–9   | 10 or more |
|---|---------|-----|---------|-------|------------|
| answers   | III     | III | III     | I IHI | ΙΙ         |
| How many kilograms of plastic are collected?    | 4–6     | 7–9 | 10–12   | 13–15 |            |
| answers   | III LHI | III | IIII    | III   |            |
| How many kilograms of cardboard are collected?  | 3–5     | 6–8 | 9–11    | 12–14 | 15–17      |
| answers   | III     | III | III IHI | III   | I          |

### **THL** = 5

| (i)  | How many waste collectors were asked the questions?   |     |
|------|---|-----|
|      |   | [1] |
| (ii) | The average amount of plastic collected was 8 kg per collector and 11 kg cardboard.   | for |
|      | Using this information, and the prices in the table on page 14, how much is o collector paid by the local middlemen for 8 kg of plastic and 11 kg of cardboard? | ne  |
|      | Space for working.  |     |
|      |   |     |
|      |   |     |
|      |   |     |
|      | plastic   |     |
|      | cardboard   |     |
|      |   | [2] |

(e) Many tourists already come to Puno and Lake Titicaca. The city authorities want to increase numbers further. Tourists often complain about the waste left around the city. The city authorities estimate that only 23% of households carry out any recycling. They proposed the following plan which included: buying more waste trucks building more waste recycling centres building special waste pits lined with plastic outside the city (i) How could this plan help to make the city more attractive to tourists? (ii) How could the city authorities make money from the plan? (iii) How could the population of Puno benefit from the plan? (iv) Some of the waste collectors do not like this plan. Suggest why.

For Examiner's Use

### Factsheet about the Puno area

For Examiner's Use

- Livestock farming dominates the area around Puno
- Where crops are grown, lake water for irrigation is used
- Only 10% of households have a piped water supply
- Tourists hire boats to go sport fishing in the lake
- Some tourists stay with local families
- Tourists walk around the lake to see the birdlife

| to the environment and does not change local people's way of life. |
