BIOLOGY 5090/21

Paper 2 Theory May/June 2011

1 hour 45 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Section A

Answer all questions.

Write your answers in the spaces provided on the Question Paper.

Section B

Answer all questions.

Write your answers in the spaces provided on the Question Paper.

Section C

Answer **one** question.

Write your answers in the spaces provided on the Question Paper.

You are advised to spend no longer than one hour on Section A. At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 11 printed pages and 1 blank page.

Section A

Answer all the questions in this section.

Write your answers in the spaces provided.

1 Fig. 1.1 shows how, in 1951, some compounds of mercury (an inorganic substance) entered and passed along a food chain.

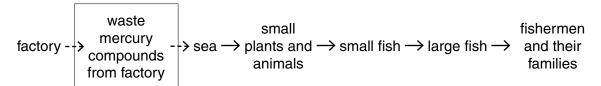

Fig. 1.1

(a) Name a producer in Fig. 1.1.[1]

Table 1.2 shows the concentration of mercury in parts per billion (ppb) in unpolluted sea water, in polluted seawater, in the flesh of the small fish and in the flesh of the large fish.

Table 1.2

unpolluted	polluted	flesh of	flesh of
seawater / ppb	seawater / ppb	small fish / ppb	large fish / ppb
0.1	2.0	200	20 000

(b)	Calculate how many times more concentrated the mercury is in the polluted seawater than in
	the unpolluted seawater.

	[1]
(c)	Explain why the concentration of mercury changed with each successive member of the food chain.

(d) Suggest why many of the fishermen and their families suffered from mental illness.

.....[5]

.....[2] [Total: 9]

2 Fig. 2.1 shows an experiment on the uptake of water by a leafy shoot placed in a light, breezy environment.

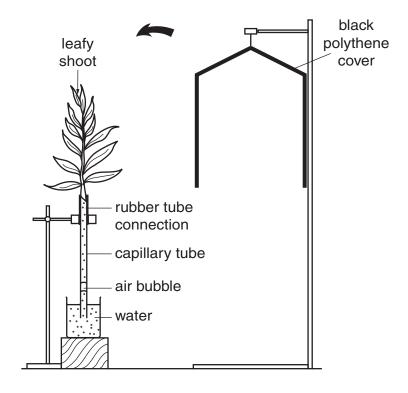

Fig. 2.1

(a)	Exp	lain what is likely to happen to the air bubble in the capillary tube.
		[3]
The	blac	ck polythene cover is then placed over the plant.
(b)	(i)	State the effect this is likely to have on what happens to the bubble.
		[2]
	(ii)	Explain your answer to b(i) .
		[6]

[Total: 11]

3 Fig. 3.1 shows some stages in human reproduction.

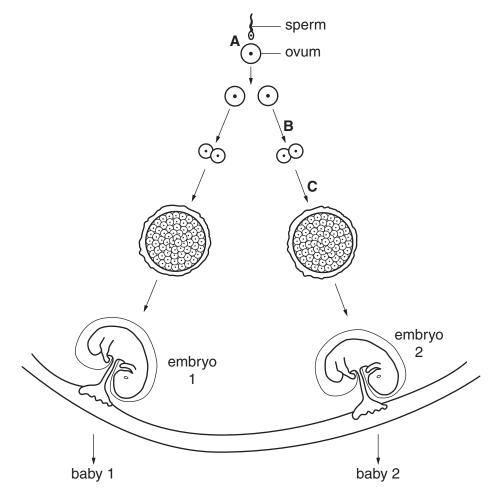

Fig. 3.1

(a)	occurs.
	process
	where it occurs[2]
(b)	Name the type of cell division taking place at B and C .
	[1]
The	two embryos develop, are born and grow to become adults.
(c)	Suggest two ways in which these two adults must be similar to each other, and explain your answers.
	1
	2
	explanation
	[4]

(d)	Suggest two ways in which they may differ from one another, and explain your answers.
	1
	2
	explanation
	[4]
	[4]
	[Total: 11]

4 Fig. 4.1 shows a section through a flower. A pollen grain has been deposited on the carpel.

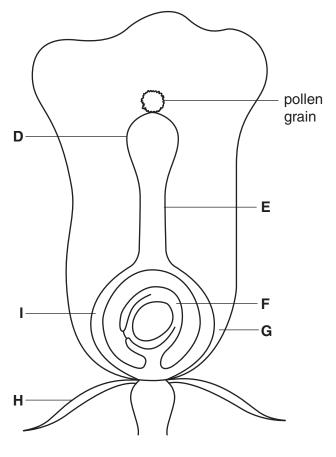

Fig. 4.1

Name the process that has occurred in bringing the pollen grain to the carpel.

		[1]
(ii)	State how this process has been brought about in this flower and give two reasons your answer.	for
	how the process has been brought about	
	reason 1	

- (b) On Fig. 4.1, draw and label the pollen tube and the nuclei as they would appear just before the nuclei fuse.
- (c) Changes occur in the flower after the nuclei fuse. Use the letters in Fig. 4.1 to identify

reason 2[3]

[Total: 11]

5 Fig. 5.1 shows the percentage of undigested molecules of starch as they pass through the alimentary canal.

region of alimentary canal

Fig. 5.1

(a)	Name the parts of the alimentary canal represented by K and L .	
	K	
	L	[2]
(b)	State and explain what happens to the digestion of starch between ${\bf M}$ and ${\bf N}$.	
		[4]
(c)	Explain why the curve is not shown extending into region L of the graph.	
		[2]

[Total: 8]

Section B

Answer all questions in this section.

Write your answers in the spaces provided.

6	(a)	With reference to the blood vessels involved, describe
		 how the liver is supplied with the requirements for its functions
		how its products are taken away.
		[8]
	(b)	Explain the importance of capillaries in excretory organs.
	(=)	Zapiam the imperiance of capitalises in oxidiatory organic.
		ro.

[Total: 10]

7	(a)	Describe how processes that occur in a green leaf play a part in the carbon cycle.
		[7]
	(b)	Explain why varying the light intensity does not always alter the rate of photosynthesis in a plant.
		[3]

Section C

Answer one question from this section.

Write your answers in the spaces provided.

8	(a)	Describe the functions of the cell membrane.
		[5]
	(b)	Explain the advantages to a plant of having its cell membranes surrounded by cell walls.
		[5]
		[Total: 10]

9	(a)	For each of the following, state where, in the reflex arc, they are found and state their functions.
		sensory neurones
		• relay neurones
		• motor neurones
		[5]
	(b)	Explain why, just after hearing a sudden loud noise, a person's heart beats faster.
		[5]
