Paper 3 Theory (Core)

May/June 2022

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

#### **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

#### **INFORMATION**

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.

1 (a) Fig. 1.1 is a diagram of the human gas exchange system.

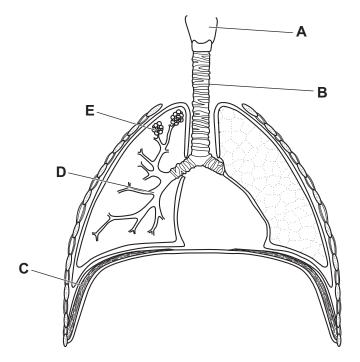

Fig. 1.1

| identify the letter in Fig. 1.1 that shows: |
|---|
| the position of the larynx                  |
| the position of the alveoli                 |

[2]

(b) The composition of inspired air is different from expired air.

Complete these sentences.

Expired air contains ...... carbon dioxide than inspired air.

Expired air also contains ...... vapour.

Both of these substances are products of ......, the process used to release energy from nutrients.

[3]

(c) A student investigates the relationship between height and lung volume in five different people.

Fig. 1.2 shows the apparatus the student uses.

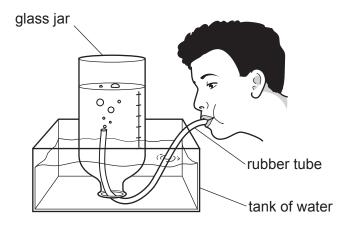

Fig. 1.2

Each person blows into the rubber tube.

The student records the volume of expired air that is blown into the glass jar by each person.

This volume of expired air is used as an estimate of their lung volume.

The student also records the height of each person.

Table 1.1 shows the results.

Table 1.1

| person | height<br>/cm | estimated lung<br>volume<br>/dm <sup>3</sup> |
|--------|---------------|--|
| Α      | 155           | 3.2  |
| В      | 122           | 1.8  |
| С      | 145           | 2.9  |
| D      | 136           | 2.3  |
| E      | 140           | 2.5  |

| (i)  | Identify the person with the largest estimated lung volume in Table 1.1 [1]      |
|------|--|
| (ii) | Describe the relationship between height and estimated lung volume in Table 1.1. |
|      |  |
|      | [1]  |

(d) Fig. 1.3 is a diagram of the human circulatory system.

The arrows show the direction of blood flow.

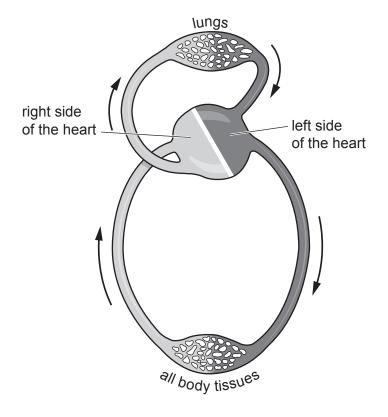

Fig. 1.3

(i) Draw a label line and the letter P to show the position of the pulmonary vein on Fig. 1.3. [1]

(ii) State the name of the structures inside the circulatory system that ensure one-way flow of blood. [1]

(e) Blood contains red blood cells. [1]

Describe the function of red blood cells. [2]

[Total: 11]

| (a)  | Zind  | c is extracted from zinc oxide by heating with carbon.  |
|------|-------|---|
|      | The   | equation for this reaction is shown.  |
|      |       | zinc oxide + carbon $\rightarrow$ zinc + carbon dioxide   |
|      | (i)   | State the type of chemical change that occurs when compounds lose oxygen.   |
|      |       | [1]   |
|      | (ii)  | State the name given to any chemical reaction that absorbs (takes in) heat energy.  |
|      |       | [1]   |
|      | (iii) | Explain why zinc <b>can</b> be extracted from zinc oxide by heating with carbon but magnesium <b>cannot</b> be extracted from magnesium oxide by heating with carbon. |
|      |       |   |
|      |       | יכו   |
| (b)  | Evo   | ess zinc oxide is added to dilute sulfuric acid.  |
| (15) |       | nc salt and one other compound are formed.  |
|      | (i)   | Complete the word equation for this reaction.   |
|      | (')   | Complete the word equation for this reaction.   |
|      |       | zinc oxide  |
|      |       | [2]   |
|      | (ii)  | Describe what happens to the pH value of the reaction mixture during this reaction.   |
|      |       | [1]   |
| (c)  | An :  | atom of zinc is represented as shown.   |
| (0)  | ,     |   |
|      |       | <sup>65</sup> <sub>30</sub> <b>Zn</b>   |
|      | Dec   | luce the number of electrons and the number of neutrons in this atom of zinc.   |
|      | elec  | etrons  |
|      | neu   | trons   |
|      |       | [2]   |

**3** Fig. 3.1 shows the forces acting as a student rides on a moving scooter.

The scooter has an electric motor.

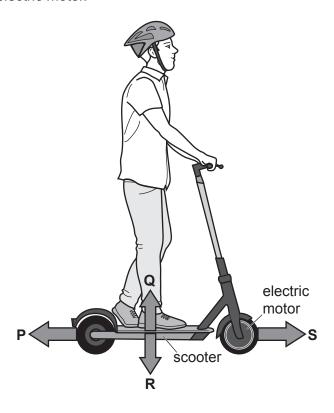

Fig. 3.1

| (a) | (i) | Force R is the result of the Earth's gravitational field acting on the total mass of the |
|-----|-----|--|
|     |     | student and the scooter.   |

Name force **R**. ......[1]

(ii) The total mass of the student and the scooter is 35 kg.

Calculate the magnitude of force **R**.

The gravitational force on unit mass is 10 N/kg.

force **R** = ...... N [2]

**(b)** Fig. 3.2 shows a speed-time graph for the motion of the scooter.

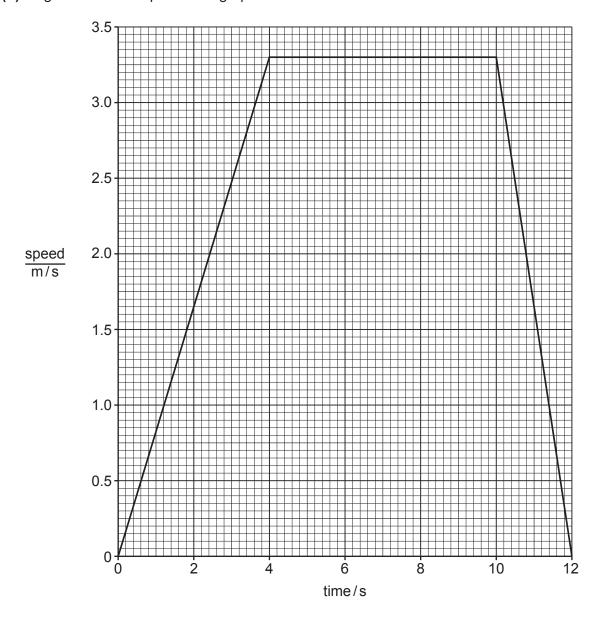

Fig. 3.2

(i) State the maximum speed of the scooter in Fig. 3.2.

maximum speed = ..... m/s [1]

(ii) Calculate the distance travelled by the scooter while at maximum speed.

distance = ..... m [2]

(iii) The scooter has a speedometer that shows the speed in km/h.

At one point the speedometer reads 3.6 km/h.

Show that  $3.6 \, \text{km/h}$  is the same as  $1.0 \, \text{m/s}$ .
