Cambridge International Advanced Level

CANDIDATE NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
FURTHER MATHEMA	ATICS		9231/13
Paper 1		O	ctober/November 2019
			3 hours
Candidates answer or	the Question Paper.		
Additional Materials:	List of Formulae (MF10)		

#### **READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

The use of a calculator is expected, where appropriate.

Results obtained solely from a graphic calculator, without supporting working or reasoning, will not receive credit.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

	Find the general solution when $\theta = -1$ .

11 Answer only **one** of the following two alternatives.

# **EITHER**

It is given that  $w = \cos y$  and

$$\tan y \frac{\mathrm{d}^2 y}{\mathrm{d}x^2} + \left(\frac{\mathrm{d}y}{\mathrm{d}x}\right)^2 + 2\tan y \frac{\mathrm{d}y}{\mathrm{d}x} = 1 + \mathrm{e}^{-2x}\sec y.$$

(i)	Show that
	$\frac{\mathrm{d}^2 w}{\mathrm{d}x^2} + 2\frac{\mathrm{d}w}{\mathrm{d}x} + w = -\mathrm{e}^{-2x}.$ [4]
(ii)	Find the particular solution for y in terms of x, given that when $x = 0$ , $y = \frac{1}{3}\pi$ and $\frac{dy}{dx} = \frac{1}{\sqrt{3}}$ . [10]

OR

The curves  $C_1$  and  $C_2$  have polar equations, for  $0 \leqslant \theta \leqslant \frac{1}{2}\pi$ , as follows:

$$C_1 : r = 2(e^{\theta} + e^{-\theta}),$$
  
 $C_2 : r = e^{2\theta} - e^{-2\theta}.$ 

The curves intersect at the point *P* where  $\theta = \alpha$ .

(i)	Show that $e^{2\alpha} - 2e^{\alpha} - 1 = 0$ . Hence find the exact value of $\alpha$ and show that the value of $r$ at $P$ is $4\sqrt{2}$ .

(11)	Sketch $C_1$ and $C_2$ on the same diagram.	[3]
(iii)	Find the area of the region enclosed by $C_1$ , $C_2$ and the initial line, giving your answer corrections of $C_1$ , $C_2$ , and $C_3$ are $C_4$ , $C_5$ , $C_6$ , $C_7$ , $C_8$ , and $C_8$ , $C_9$ , $C_9$ , $C_9$ , and $C_9$ , $C_$	t to
	3 significant figures.	[5]
