Paper 4 Further Probability & Statistics

May/June 2021

1 hour 30 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

### **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

# **INFORMATION**

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [ ].

This document has 12 pages.

Farmer A grows apples of a certain variety. Each tree produces 14.8 kg of apples, on average, per year. Farmer B grows apples of the same variety and claims that his apple trees produce a higher mass of apples per year than Farmer A's trees. The masses of apples from Farmer B's trees may be assumed to be normally distributed.

A random sample of 10 trees from Farmer B is chosen. The masses,  $x \log$ , of apples produced in a year are summarised as follows.

	$\sum x = 152.0$	$\sum x^2 = 2313.0$	
Test, at the 5% significance level	, whether Farme	r <i>B</i> 's claim is justified	. [6]

A company is developing a new flavour of chocolate by varying the quantities of the ingredients. A random selection of 9 flavours of chocolate are judged by two tasters who each give marks out of 100 to each flavour of chocolate.

Chocolate	A	В	С	D	E	F	G	Н	I
Taster 1	72	86	75	92	98	79	87	60	62
Taster 2	84	72	74	95	85	87	82	75	68

Carry out a Wilcoxon matched-pairs signed-rank test at the 10% significance leve whether, on average, there is a difference between marks awarded by the two tasters.	I to investigate [7]

3

The heights, x m, of a random sample of 50 adult males from country A were recorded. The heights, y m, of a random sample of 40 adult males from country B were also recorded. The results are summarised

	$\sum x = 89.0$	$\sum x^2 = 159.4$	$\sum y = 67.2$	$\sum y^2 = 113.1$	
Find a 95% co A and adult n	onfidence interv nales from count	al for the difference try $B$ .	e between the me	an heights of adult males fi	rom countr [8

	$G_X(t) = \frac{1}{3 - 2t^2} .$	
(a)	Find $E(X)$ and $Var(X)$ .	[5]

<b>(b)</b>	Find $P(X = 4)$ .	[3]

(a)	Explain how this inform	ation ten	ds to sup	port the	manage	er's susp	oicion.
