#### **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

**Cambridge International General Certificate of Secondary Education** 

## MARK SCHEME for the October/November 2014 series

# 0420 COMPUTER STUDIES

**0420/12** Paper 1, maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2014 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

|--------|---|----------|-------|
|        | Cambridge IGCSE – October/November 2014 | 0420     | 12    |

5 (a)

| Sat Nav devices send signals to the global positioning satellites                      | TRUE | FALSE |
|--|------|-------|
| Sat Nav accurately measures vehicle speed using satellite position and accurate timing | TRUE | FALSE |
| Satellites tell the Sat Nav which direction the vehicle should take                    | TRUE | FALSE |

[3]

- (b) Any two from:
  - software/maps not up to date/new road
  - loss of <u>satellite</u> signals
  - wrong data input by user (e.g. start point and end point)

[2]

[2]

**6 (a)** 1 mark for each error and suggested correction (accept description or example of corrected pseudocode).

**error:** line 10: total = 1

**correction:** totals should be set to zero; total = 0

**error:** line 30: ... number < 10 ...

correction: check should be made if number > 10; ... number > 10 ...

error: no input inside loop correction: input number

**error:** line 50: x = x + 1

**correction: for** ... **to** loops don't need a counter; remove line 50 altogether

error: line 80: output x

**correction:** output should be total value; **output** total [5]

**(b)** division by zero error (or similar description of error produced when dividing by 0)

add an error trap after input of number e.g. 40 **if** number = 0 **then** k = 0 **else** k = x/number

|   |     |        | Cambridge IGCSE – October/November 2014   | 0420   | 12  |

#### (c) Any four points from:

- sensors continuously send signals/data
- sensor sends signals/data sent to the microprocessor
- signal converted to digital if necessary (using ADC)
- microprocessor checks which door(s) is (are) affected
- microprocessor compares sensor reading with stored values
- if reading indicates passenger detected...
- ...microprocessor sends signal/data to actuators/motor...
- (converted to analogue using DAC)
- ...to operate motors to open doors
- microprocessor also send signal to driver's cab (automatically) to sound an alarm
- monitoring continues until system switched off

#### (b) 1 mark for each device + 1 mark for correct matching use

device: beeper/loud speaker

use: to indicate barcode correctly read/error in reading barcode

device: (LCD) screen/monitor

use: to show prices and other information about goods

device: touch screen

use: to show prices and other information about goods/to select items that need to be

weighed/identified

device: weighing machine

use: to find weight of loose items (e.g. fruit) to enable pricing

device: (magnetic) card reader/CHIP and PIN reader

use: to read customer's debit/credit card/enable customer to pay for goods using a

credit or debit card

device: printer

use: to print receipts

(NOT keypad) [4]

**11** (a) = 
$$(B2/24) * B3$$

**(b)** = 
$$C4 * B5$$

0 0 0 0 0

[4]

(b) 2 marks for identifying the letter

letter: H

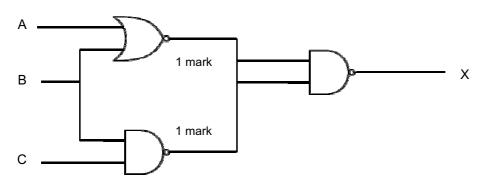

[2]

| Page 10 | Mark Scheme Sy                          |      | Paper |
|---------|---|------|-------|
|         | Cambridge IGCSE – October/November 2014 | 0420 | 12    |

13 (a)

| A | В | С | x |         |  |
|---|---|---|---|---------|--|
| 0 | 0 | 0 | 0 | 1 mark  |  |
| 0 | 0 | 1 | 0 | Tillaik |  |
| 0 | 1 | 0 | 1 | 4       |  |
| 0 | 1 | 1 | 1 | 1 mark  |  |
| 1 | 0 | 0 | 1 |         |  |
| 1 | 0 | 1 | 1 | 1 mark  |  |
| 1 | 1 | 0 | 1 |         |  |
| 1 | 1 | 1 | 1 | 1 mark  |  |

(b) 1 mark per correct NOR gate and NAND gate on the left (ONLY accept two-input gates)

[2]

[4]

**(c)** 1 mark per logic statement as shown below:

$$(A = 1 \text{ AND } B = 1) \text{ OR } (B = \text{NOT } 1 \text{ AND } C = 1)$$
  
 $(1 \text{ mark})$   $(1 \text{ mark})$   $(1 \text{ mark})$ 

The above can be written as:

Note: allow 1<sup>st</sup> part of formula and 2<sup>nd</sup> part of formula to be reversed: (e.g. (NOT B AND C) OR (A AND B))

Also accept Boolean algebra:

a.b + 
$$\overline{b}$$
.c (can be written as: A.B + B.C) (1 mark) (1 mark) (1 mark) [3]

| Page 11 | Mark Scheme                             | Syllabus | Paper |
|---------|---|----------|-------|
|         | Cambridge IGCSE – October/November 2014 | 0420     | 12    |

**NOTE:** sum1, sum2 and total MUST be initialised for all three inputs to get the mark; allow repetition in any of the columns EXCEPT the OUTPUT column (e.g. sum1 can be 0, 47, 47, 47, 47, 47, 47, 47);

| sum1 | sum2 | total | а | b | С | d | е | f | OUTPUT      |
|------|------|-------|---|---|---|---|---|---|-------------|
| 0    | 0    | 0     | 4 | 3 | 2 | 0 | 0 | 8 |             |
| 47   | 8    | 55    |   |   |   |   |   |   |             |
|      |      | 44    |   |   |   |   |   |   |             |
|      |      | 33    |   |   |   |   |   |   |             |
|      |      | 22    |   |   |   |   |   |   |             |
|      |      | 11    |   |   |   |   |   |   |             |
|      |      | 0     |   |   |   |   |   |   | data are OK |
| 0    | 0    | 0     | 5 | 0 | 1 | 2 | 3 | 4 |             |
| 34   | 16   | 50    |   |   |   |   |   |   |             |
|      |      | 39    |   |   |   |   |   |   |             |
|      |      | 28    |   |   |   |   |   |   |             |
|      |      | 17    |   |   |   |   |   |   |             |
|      |      | 6     |   |   |   |   |   |   |             |
|      |      | -5    |   |   |   |   |   |   | error       |
| 0    | 0    | 0     | 0 | 0 | 0 | 0 | 0 | 0 |             |
|      |      |       |   |   |   |   |   |   |             |

1 mark 1 mark 1 mark < - - - - - 1 mark - - - - - - > 1 mark

**15** 1 mark per feature applied to text in question:

taxi — search and replace feature/retype/thesaurus

yelow — yellow – spell checker/retype/auto-correct

changed — replaced – search and replace feature/retype/thesaurus

translate last sentence/line – (auto-)translator English to Spanish/other language

|         | Cambridge IGCSE – October/November 2014 | 0420     | 12    |

# 16 marking points:

- initialise highest value (zero or less)
- loop control for all 3000 students
- set total = 0 (to find the average) before second loop
- loop control for all 8 exams
- check if input mark higher than stored highest mark
- if input mark higher, then set highest to this new value
- find the average mark for each student (includes correct total addition)
- both outputs in the correct place
   (average after inside loop, highest outside outer loop)
   (must be an attempt to find both average and highest to earn this mark)

### sample program:

```
highest = -1
                                                    1 mark
for student = 1 to 3000
                                                    1 mark
    total = 0
                                                    1 mark
    for exam = 1 to 8
                                                    1 mark
        input mark
        total = total + mark
        if mark > highest then highest = mark
                                                    2 marks
    next
    average = total/8
                                                    1 mark
    output average
next
output highest
                                                    1 mark
                                                                                             [5]
```
