MARINE SCIENCE 9693/01

Paper 1 AS Structured Questions

October/November 2013
1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough work.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

Electronic calculators may be used.

1 (a) Fig. 1.1 shows the relative numbers of organisms in two identical food chains.

For Examiner's Use

One food chain is from a marine reserve and the other is from an area of ocean that is fished.

		Fig. 1.1
(i)		ate two differences between these food chains and suggest an explanation for ch difference.
	1	difference
		explanation
	2	difference
		explanation
		[4]
(ii)		th reference to Fig. 1.1, explain the meanings of the terms <i>predator, prey</i> and phic level.
	pre	edator
	pre	эу
	tro	phic level
		[6]

(b) Fig. 1.2 shows a typical marine predator-prey relationship.

Use

For Examiner's

Fig. 1.2

(i)	Add an appropriate label to each axis.	[2]
(ii)	State which line, A or B , represents the predator. Explain your answer.	
		[1]

[Total: 13]

2 Fig. 2.1 shows the relative amounts of energy in arbitrary units at different trophic levels in a marine food chain.

For Examiner's Use

[2]

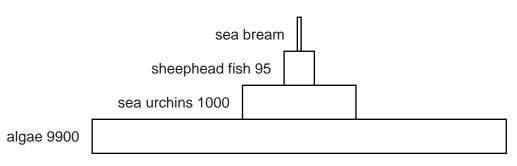

Fig. 2.1

(a) Calculate the percentage of energy lost between the algae and the sea urchins.

(b)	Estimate the relative amount of energy in the sea bream.
	[1]
(c)	State three ways in which energy is lost from a food chain.
	1
	2
	3
	[3]
	[Total: 6]

Turn over for Q3

3 (a) Fig. 3.1 shows the productivity at different depths in the Indian Ocean. For Examiner's Use 20 Key - 1 metre deep productivity ---- 10 metres deep /g carbon 10 ···×···· 100 metres deep $m^{-3} dav^{-1}$ Aug Sep month Fig. 3.1 State the month in which the productivity at a depth of 1 metre was greatest. (ii) Describe and explain the relationship between productivity and depth. description.....

For Examiner's Use

(b)	Hyd plac	rothermal vents are found at great depths where photosynthesis does not take e.
	Che	mosynthetic bacteria are found in these areas.
	Stat	e one similarity and one difference between photosynthesis and chemosynthesis.
	(i)	similarity
		[1]
		difference
		[1]
	(ii)	Explain why hydrothermal vents have a low biodiversity.
		[3]
		[Total: 9]

	Outline the conditions that are required for the growth of corals.
	[4]
(b)	The time of year in which corals spawn is influenced by water temperature.
	Suggest two factors, other than temperature, that influence the time of spawning.
	1
	2
	[2]
(c)	
(c)	[2]
(c)	In order to re-establish corals on reefs, corals can be grown artificially. Coral eggs and sperm are collected from the reef and grown in culture. The larvae are
(c)	In order to re-establish corals on reefs, corals can be grown artificially. Coral eggs and sperm are collected from the reef and grown in culture. The larvae are then transplanted onto the reef. Fig. 4.1 shows some of the steps in this process. Step 1 Step 2
(c)	In order to re-establish corals on reefs, corals can be grown artificially. Coral eggs and sperm are collected from the reef and grown in culture. The larvae are then transplanted onto the reef. Fig. 4.1 shows some of the steps in this process.
(c)	In order to re-establish corals on reefs, corals can be grown artificially. Coral eggs and sperm are collected from the reef and grown in culture. The larvae are then transplanted onto the reef. Fig. 4.1 shows some of the steps in this process. Step 1 Collect gametes (eggs Transfer gametes to

(c)	In order to re-establish corals on reefs, corals can be grown artificially. Coral eggs and sperm are collected from the reef and grown in culture. The larvae are then transplanted onto the reef. Fig. 4.1 shows some of the steps in this process. Step 1 Collect gametes (eggs and sperm) from reef. Step 2 Transfer gametes to fertilisation tank. Step 4 Leave gametes to Step 3 Stir gametes.

	Suggest a reason for each of the following steps.		
	(i)	stirring the gametes in step 3	
		[1]	
	(ii)	leaving undisturbed in step 6	
		[1]	
(d)	Exp	lain how coral reefs provide protection for coastal areas.	
		[3]	
		[Total: 11]	

For

5 (a) Salinity is the mass of salts dissolved in 1 kg of water. It is measured in parts per thousand (‰).

For Examiner's Use

The mean salinity of the world's oceans is 35%. The salinity was measured in three different seas.

Table 5.1 shows the mean salinity in these seas.

Table 5.1

sea	mean salinity (‰)
А	36
В	300
С	7

(i)	Compare the salinity of the three seas.
	[3]
(ii)	Suggest explanations for the salinity in each of the following seas.
	Sea B
	Sea C
	[5]

(b)	Explain how volcanic activity can affect the chemical composition of sea water.	For Examiner's Use
	[4]	
	[Total: 12]	

6 (a) Fig. 6.1 shows the main features of the ocean floor.

For Examiner's Use

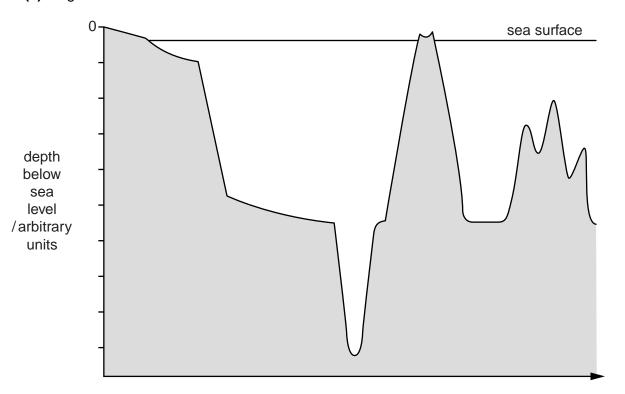

Fig. 6.1

(1)	Label an abyssal plain on Fig. 6.1. Use a guideline and the letter A. [1]
(ii)	Describe the main features of an abyssal plain.
	[3]
(iii)	Explain how an abyssal plain is formed.
(,	
	[3]

(b)	(i)	With reference to Fig. 6.1, explain how underwater earthquakes are caused.	For
			Examiner's Use
		[3]	
	(ii)	Explain how these underwater earthquakes can cause a tsunami.	
		[2]	
		121	1

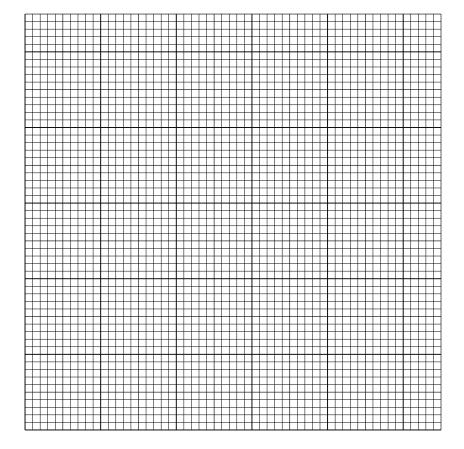

(c) Table 6.1 shows how the wavelength of a tsunami wave varies with ocean depth.

For Examiner's Use

Table 6.1

depth/m	wavelength/km
10	10
50	23
200	48
500	75
1000	105

(i) Plot a graph to show the effect of depth of the ocean on the wavelength of the tsunami wave.

[3]

(ii)	Describe the tsunami wave	•	between	the	ocean	depth	and	the	wavelengtl	n of	the
			•••••						•••••	•••••	

......[2

[Total: 17]

(a)										
	(i) phosphorus[1]	Examiner's Use								
	(ii) magnesium[1]									
(b)	Explain how nitrogen atoms, present in nitrate ions in the soil, may become incorporated into organic compounds in the tissue of a marine fish.									
	[5]									
	[Total: 7]
