PHYSICS 5054/21

Paper 2 Theory May/June 2012

1 hour 45 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

### **Section A**

Answer all questions.

Write your answers in the spaces provided on the Question Paper.

### **Section B**

Answer any two questions.

Write your answers in the spaces provided on the Question Paper.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

## **Section A**

Answer all the questions in this section. Answer in the spaces provided.

An astronaut standing on the Moon throws a stone vertically upwards. The stone leaves his hand at time t = 0. The line on Fig. 1.1 shows how the velocity v of the stone varies with time t until t = 2.0 s.

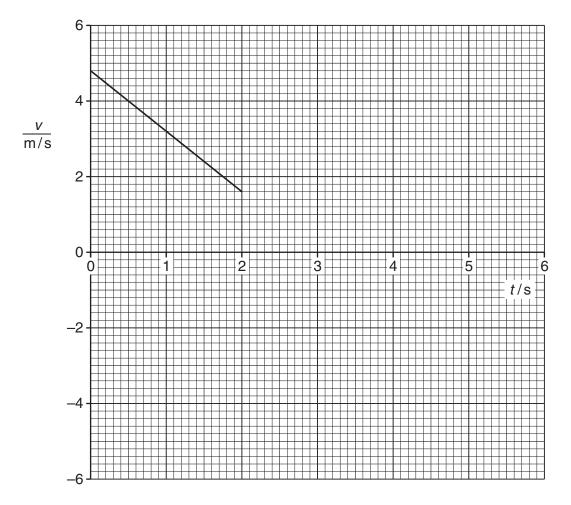

Fig. 1.1

(a) After rising, the stone falls. The astronaut catches the stone at t = 6.0 s. There is no air resistance on the Moon.

| (i) | Complete Fig. 1.1 until $t = 6.0 \mathrm{s}$ . | [1] | ] |
|-----|--|-----|---|
|-----|--|-----|---|

(ii) State the value of t when the stone is at its highest point.

.....[1]

| (b) | Calculate the | acceleration o | of the stone | between $t = 0$ | and $t = 2.0  s$ . |
|-----|---------------|----------------|--------------|-----------------|--------------------|
|     |               |                |              |                 |                    |

|     | acceleration =  | [2] |
|-----|---|-----|
| (c) | A stone is thrown vertically upwards on the Earth with the same initial velocity. State two ways in which the velocity-time graph for this stone differs from Fig. 1.1. |     |
|     | 1   |     |
|     | 2   | [2] |

**2** Fig. 2.1 shows a windsurfer, sail and board.

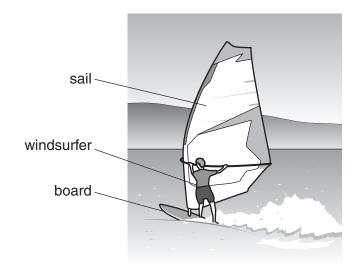

Fig. 2.1

The total mass of the windsurfer, sail and board is 90 kg. They travel at a constant speed of 5.0 m/s.

(a) Calculate the total kinetic energy of the windsurfer, sail and board.

|     |      | kinetic energy =[2]  |
|-----|------|--|
| (b) | The  | wind exerts a forward force on the sail.   |
|     | (i)  | Explain, in terms of the forces acting, why the board travels at a constant speed.   |
|     |      |  |
|     |      |  |
|     |      | [2]  |
|     | (ii) | The wind does work on the sail. Explain, in terms of the conservation of energy, why the total kinetic energy does not increase. |
|     |      |  |
|     |      |  |

**3** A student measures the pressure inside a bicycle tyre using a pressure gauge he has constructed. Fig. 3.1 shows the apparatus he uses. The piston and rod move along the smooth cylindrical tube.

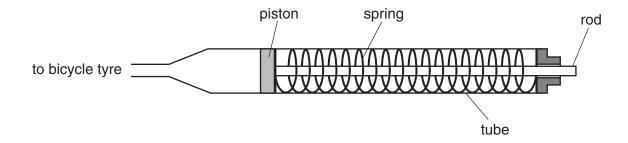

Fig. 3.1

The change in length of the spring is proportional to the force applied to the spring. A force of 2.8 N compresses the spring by 2.0 cm.

The student connects the pressure gauge to the tyre. Air from the tyre exerts a force on the piston. As the piston moves, the spring is compressed. The piston moves 10 cm to the right and then stops.

| (a) | Calculate t | the force | exerted of | on the | piston b  | v the s | princ |
|-----|-------------|-----------|------------|--------|-----------|---------|-------|
| (a) | Calculate   |           | ever rea r | on me  | pistori u | y uic s | PΠ    |

|     | •   | - |
|-----|---|---|
| ` ' | The cross-sectional area of the piston is $3.0\times10^{-5}\text{m}^2$ . Calculate the pressure of the air inside the tyre. | е |
|     |   |   |

force = .....[1]

| Each time that the pressure gauge is used, the pressure in the tyre falls slightly. The temperature stays constant. Describe, using ideas about molecules, why the pressure falls. |
|--|
|  |
|  |
| [2]  |

**4** A student slowly heats a sample of solid wax in a test-tube. Fig. 4.1 shows how the temperature of the wax varies with time *t*.

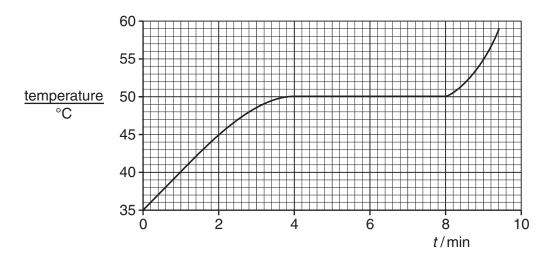

Fig. 4.1

| (a) | Stat | e what is meant by the <i>melting point</i> of a substance.   |
|-----|------|---|
|     |      |   |
|     |      | [1]   |
| (b) | The  | rmal energy (heat) passes into the wax throughout the experiment.   |
|     | (i)  | Describe what effect this energy has on the wax between $t = 0$ and $t = 4$ min.  |
|     |      |   |
|     |      | [1]   |
|     | (ii) | Describe and explain what effect this energy has on the wax between $t=4$ min and $t=8$ min.                            |
|     |      |   |
|     |      |   |
|     |      | [2]   |
| (c) |      | wax expands as the temperature rises. It expands more between $t=8$ min and 9 min between $t=0$ and 1 min. Explain why. |
|     |      |   |
|     |      | [41]  |

|    |      | [2   | <br>21 |
| c) | Stat | te the component of the electromagnetic spectrum used for satellite communication.   | -1     |
|    |      | [1   | ]      |

A sound from an electronic organ is played into a microphone which is connected to a cathode-ray oscilloscope (c.r.o.). Fig. 6.1 shows the trace on the c.r.o. produced by the sound.

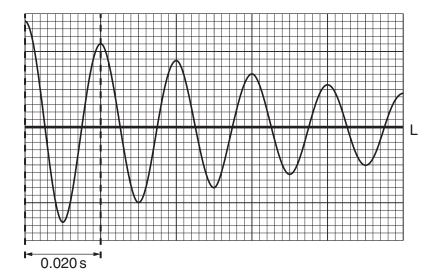

Fig. 6.1

The horizontal line marked L is the trace seen when there is no sound.

| (a) (i) | State how Fig. 6.1 shows that the loudness of the sound decreases with time.                             |
|---------|--|
| (ii)    | State how Fig. 6.1 shows that the pitch of the sound is constant.  |
| (b) (i) | State what is meant by the <i>frequency</i> of a wave.   |
|         |  |
| (ii)    | The time for one complete cycle of the wave in Fig. 6.1 is 0.020 s. Calculate the frequency of the wave. |
|         | frequency =[2]   |

Determine the time taken for the amplitude of the trace in Fig. 6.1 to decrease to half its

time = .....[1]

(iii)

initial value.

**7** Fig. 7.1 is the circuit diagram of a circuit set up by a student.

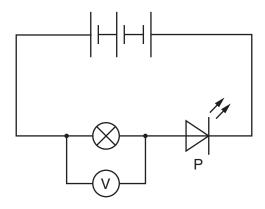

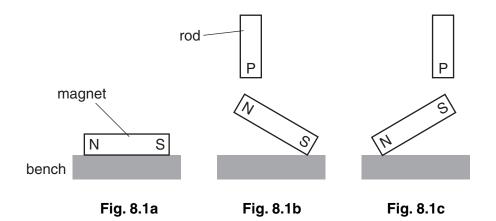

Fig. 7.1

The student uses three cells, each of electromotive force (e.m.f.) 1.5 V. The cells are connected in series, as shown.

|     | , -  |  |     |
|-----|------|--|-----|
| (a) |      | te the name of component P.  | [1] |
| (b) | Sta  | te what is meant by the <i>electromotive force</i> of a cell.  |     |
| (-) |      |  |     |
| (c) |      | e student expects the reading on the voltmeter to be 4.5 V. The actual reading is 0.2 V.  Iggest <b>two</b> reasons why the voltmeter reading is much less than 4.5 V. |     |
| (d) | (i)  | In the space below, draw three cells connected in parallel.  |     |
|     |      |  |     |
|     | (ii) | State one advantage of connecting cells in parallel.   | [1] |
|     |      |  | [1] |

**8** (a) A magnet is placed on a bench, as shown in Fig. 8.1a. End P of a rod is held above each end of the magnet in turn, as shown in Fig. 8.1b and in Fig. 8.1c. One end of the magnet is lifted off the bench in both cases.

| (ii) | Explain how the rod lifts each end of the magnet off the bench. |     |  |  |  |  |  |
|------|---|-----|--|--|--|--|--|
|      |   |     |  |  |  |  |  |
|      |   |     |  |  |  |  |  |
|      |   | [0] |  |  |  |  |  |

**(b)** Fig. 8.2 and Fig. 8.3 show views of a wire carrying a current downwards through a horizontal board.

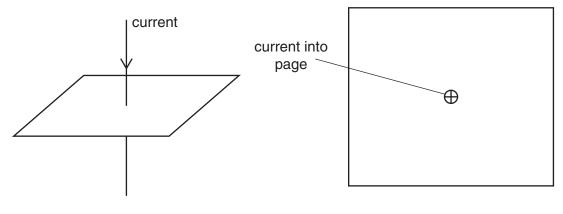

Fig. 8.2 Fig. 8.3 (viewed from above)

(i) On Fig. 8.3, draw the magnetic field due to the current in the wire.

(ii) The magnetic field is stronger closer to the wire. State how the magnetic field lines indicate that the field is stronger.
