CHEMISTRY 5070/32

Paper 3 Practical Test

October/November 2011

1 hour 30 minutes

Candidates answer on the Question Paper

Additional Materials: As listed in the Confidential Instructions

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black ink.

You may use a soft pencil for any diagrams, graphs or rough work.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Qualitative Analysis Notes are printed on page 8.

You should show the essential steps in any calculations and record experimental results in the spaces provided on the question paper.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

| For Examiner's Use |  |  |

| Total              |  |  |

This document consists of 6 printed pages and 2 blank pages.

1 Solid calcium carbonate is sometimes found on indoor surfaces which are in contact with water. This solid is called *scale*. Hydrochloric acid can be used as a scale-remover. It removes the scale by reacting with the carbonate.

For Examiner's Use

You are to determine the concentration of the acid in the scale-remover by titrating a diluted solution of the acid with aqueous sodium carbonate.

**P** is dilute hydrochloric acid. It has been made by adding distilled water to 100 cm<sup>3</sup> of scale-remover until the volume was 1000 cm<sup>3</sup>.

**Q** is 0.0500 mol/dm<sup>3</sup> sodium carbonate.

(a) Put P into the burette.

Pipette a  $25.0\,\text{cm}^3$  (or  $20.0\,\text{cm}^3$ ) portion of **Q** into a flask and titrate with **P**, using the indicator provided.

Record your results in the table, repeating the titration as many times as you consider necessary to achieve consistent results.

#### Results

#### Burette readings

| titration number                        | 1 | 2 |  |
|---|---|---|--|
| final reading/cm <sup>3</sup>           |   |   |  |
| initial reading/cm <sup>3</sup>         |   |   |  |
| volume of <b>P</b> used/cm <sup>3</sup> |   |   |  |
| best titration results (✓)              |   |   |  |

#### **Summary**

| Tick (✓) the best titration results.                             |      |
|--|------|
| Using these results, the average volume of <b>P</b> required was |      |
| Volume of <b>Q</b> used wascm <sup>3</sup> .                     | [12] |
|  | ['-] |

3 **(b) Q** is 0.0500 mol/dm<sup>3</sup> sodium carbonate. Using your results from (a), calculate the concentration, in mol/dm<sup>3</sup>, of hydrochloric acid in **P**.  $Na_2CO_3 + 2HCl \rightarrow 2NaCl + H_2O + CO_2$ concentration of hydrochloric acid in P ...... mol/dm<sup>3</sup> [2] (c) Using your answer from (b) and information given in the question, calculate the concentration of hydrochloric acid in the scale-remover. concentration of hydrochloric acid in scale-remover ...... mol/dm<sup>3</sup> [1] (d) A bottle of the scale-remover contains 2000 cm<sup>3</sup> of the hydrochloric acid solution. Using your answer from (c), calculate the maximum mass of calcium carbonate that can be removed by treatment with a bottle of the scale-remover. The relative formula mass of calcium carbonate is 100.  $CaCO_3(s) + 2HCl(aq) \rightarrow CaCl_2(aq) + H_2O(l) + CO_2(g)$ 

mass of calcium carbonate removed ......g

[1]

For Examiner's Use 2 You are provided with solid **R** and solutions **S** and **T**, all of which contain different compounds of the same transition metal.

For Examiner's Use

Carry out the following tests and record your observations in the table. You should test and name any gas evolved.

| test<br>no. |  | test   | observations |
|-------------|--|--|--------------|
| 1           | 1  | 2cm depth of aqueous hydrogen peroxide in est-tube, add a small amount of <b>R</b> .   |              |
| 2           | To 2 cm depth of aqueous potassium iodide in a test-tube, add an equal volume of dilute sulfuric acid. Add a small amount of <b>R</b> to the test-tube and mix well. Allow the mixture to stand. |  |              |
| 3           | (a)  | To 2 cm depth of aqueous iron(II) sulfate in a test-tube, add an equal volume of dilute sulfuric acid. Add a small amount of <b>R</b> to the test-tube. Warm the mixture gently for about 20 seconds, then filter the warm mixture and collect the filtrate.  To the filtrate from (a), add aqueous sodium |              |
|             |  | hydroxide until no further change occurs.  |              |
| 4           | (a)  | To 2cm depth of <b>S</b> in a test-tube, add an equal volume of dilute nitric acid.  |              |
|             | (b)  | To the mixture from <b>(a)</b> , add a few drops of aqueous silver nitrate.  |              |

| test<br>no. | test   | observations |
|-------------|--|--------------|
| 5           | (a) To 2 cm depth of S in a boiling-tube add aqueous sodium hydroxide until no further change occurs.  |              |
|             | (b) To the mixture from (a), add aqueous hydrogen peroxide.  |              |
| 6           | To 2 cm depth of <b>T</b> in a test-tube, add an equal volume of dilute sulfuric acid. To the mixture add aqueous hydrogen peroxide until no further change occurs.  |              |
| 7           | (a) To 2 cm depth of <b>T</b> in a test-tube, add an equal volume of aqueous sodium hydroxide and then a small amount of <b>R</b> . Mix the contents of the test-tube for about 20 seconds. Filter the mixture and collect the filtrate. |              |
|             | (b) To the filtrate from (a), add dilute sulfuric acid.  |              |

For Examiner's Use

[21]

## **Conclusions**

Identify the anion in  ${\bf S}$ 

The anion in **S** is .....

In Tests 2 and 3 R is acting as .....

In Test 6 solution T is acting as .....

### **QUALITATIVE ANALYSIS NOTES**

# **Tests for anions**

| anion   | test   | test result                            |
|---|--|--|
| carbonate (CO <sub>3</sub> <sup>2-</sup> )                | add dilute acid  | effervescence, carbon dioxide produced |
| chloride (C $l^-$ ) [in solution]                         | acidify with dilute nitric acid, then add aqueous silver nitrate     | white ppt.                             |
| iodide (I <sup>-</sup> )<br>[in solution]                 | acidify with dilute nitric acid, then add aqueous silver nitrate     | yellow ppt.                            |
| nitrate (NO <sub>3</sub> <sup>-</sup> )<br>[in solution]  | add aqueous sodium hydroxide then add aluminium foil; warm carefully | ammonia produced                       |
| sulfate (SO <sub>4</sub> <sup>2-</sup> )<br>[in solution] | acidify with dilute nitric acid, then add aqueous barium nitrate     | white ppt.                             |

# **Tests for aqueous cations**

| cation                         | effect of aqueous sodium hydroxide                         | effect of aqueous ammonia                                      |
|--------------------------------|--|--|
| aluminium (Al <sup>3+</sup> )  | white ppt., soluble in excess giving a colourless solution | white ppt., insoluble in excess                                |
| ammonium (NH <sub>4</sub> +)   | ammonia produced on warming                                | _  |
| calcium (Ca <sup>2+</sup> )    | white ppt., insoluble in excess                            | no ppt., or very slight white ppt.                             |
| copper(II) (Cu <sup>2+</sup> ) | light blue ppt., insoluble in excess                       | light blue ppt., soluble in excess giving a dark blue solution |
| iron(II) (Fe <sup>2+</sup> )   | green ppt., insoluble in excess                            | green ppt., insoluble in excess                                |
| iron(III) (Fe <sup>3+</sup> )  | red-brown ppt., insoluble in excess                        | red-brown ppt., insoluble in excess                            |
| zinc (Zn <sup>2+</sup> )       | white ppt., soluble in excess giving a colourless solution | white ppt., soluble in excess giving a colourless solution     |

# **Tests for gases**

| gas                               | test and test result  |
|-----------------------------------|---|
| ammonia (NH <sub>3</sub> )        | turns damp litmus paper blue  |
| carbon dioxide (CO <sub>2</sub> ) | turns limewater milky   |
| chlorine (Cl <sub>2</sub> )       | bleaches damp litmus paper  |
| hydrogen (H <sub>2</sub> )        | 'pops' with a lighted splint  |
| oxygen (O <sub>2</sub> )          | relights a glowing splint   |
| sulfur dioxide (SO <sub>2</sub> ) | turns acidified aqueous potassium dichromate(VI) from orange to green |
