| CENTRE<br>NUMBER  |  |  | CANDIDATE<br>NUMBER |  |  |

CHEMISTRY 5070/21

Paper 2 Theory

October/November 2015
1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

### **Section A**

Answer all questions.

Write your answers in the spaces provided in the Question Paper.

#### **Section B**

Answer any three questions.

Write your answers in the spaces provided in the Question Paper.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

### **Section A**

Answer all the questions in this section in the spaces provided.

The total mark for this section is 45.

**A1** Choose from the following gases to answer the questions below.

ammonia
argon
carbon dioxide
chlorine
ethane
ethene
nitrogen
nitrogen(II) oxide
oxygen
sulfur dioxide

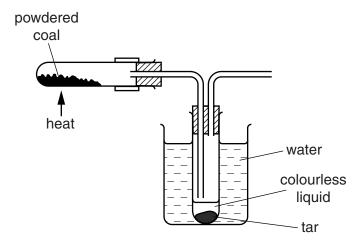

Each of these gases can be used once, more than once or not at all.

Which gas

| (a) | forms approximately 1% of the air,  |
|-----|---|
|     | [1  |
| (b) | bleaches damp litmus paper,   |
|     | [1  |
| (c) | reacts with water to form an alkaline solution,                           |
|     | [1  |
| (d) | can undergo polymerisation,   |
|     | [1  |
| (e) | is a compound formed in the atmosphere as a result of lightning activity, |
|     | [1  |
| (f) | is a diatomic molecule containing a total of 16 electrons?                |
| • / | [1  |
|     |   |

[Total: 6]

**A2** Coal is a mixture of carbon compounds with a small amount of sulfur. A sample of coal is heated in the absence of air using the apparatus shown.

The distillate is a mixture of a colourless liquid and tar.

(a) The colourless liquid contains ammonia, NH<sub>3</sub>.

Draw a 'dot-and-cross' diagram for ammonia. Show only the outer shell electrons.

[2]

**(b)** The tar contains ethanoic acid.

When warmed in the presence of sulfuric acid, ethanoic acid reacts with propanol to form an ester.

Name and draw the structure of this ester showing all the atoms and all the bonds.

name.....

structure

(c) The tar also contains a compound with the following composition.

| element  | percentage by mass |
|----------|--------------------|
| carbon   | 76.60              |
| hydrogen | 6.38               |
| oxygen   | 17.02              |

Deduce the empirical formula of this compound.

|    |       | empirical formula[2]  |
|----|-------|---|
| d) |       | en coal is burned, an acidic gas is produced which decolourises acidified aqueous assium manganate ( $ m VII$ ). This gas contributes to acid rain. |
|    | (i)   | Identify this gas and describe how acid rain is formed.   |
|    |       |   |
|    |       | [2]   |
|    | (ii)  | Give one adverse effect of acid rain on buildings.  |
|    |       | [1]   |
| (  | (iii) | Acid rain can have an adverse effect on respiration.  |
|    |       | Write an equation to represent the process of respiration.  |
|    |       | [2]   |

[Total: 11]

| А3 | A la | yer o | of ozone is present in the stratosphere about 30 km above the Earth's surface.  |     |
|----|------|-------|---|-----|
|    | (a)  | Con   | npounds with formulae such as ${\rm CC}l_3{\rm F}$ and ${\rm C_2C}l{\rm F_5}$ are responsible for the depletion ne.   | of  |
|    |      | (i)   | Give the general name for these compounds.  |     |
|    |      |       |   | 1]  |
|    |      | (ii)  | Explain, in terms of human health, why it is important that the ozone in the stratosphe does not become too depleted. | re  |
|    |      |       |   |     |
|    |      |       | [   | 2]  |
|    | (b)  | In th | ne stratosphere, ozone, O <sub>3</sub> , is broken down to oxygen by photochemical reactions.                         |     |
|    |      | (i)   | What is meant by the term photochemical reaction?   |     |
|    |      |       |   |     |
|    |      |       |   | [1] |
|    |      | (ii)  | Construct an equation for the breakdown of ozone molecules to oxygen molecules.                                       |     |
|    |      |       |   | 1]  |
|    | (c)  | Ozo   | one oxidises Fe <sup>2+</sup> ions to Fe <sup>3+</sup> ions.  |     |
|    |      | Con   | nplete the ionic equation for this reaction.  |     |
|    |      |       | ${\rm Fe^{2+}} + + {\rm H^+} + {\rm O_3} \rightarrow + {\rm Fe^{3+}} + {\rm H_2O} + {\rm O_2}$ [                      | [1] |

[Total: 6]

| A4 Copper is a | metal. |
|----------------|--------|
|----------------|--------|

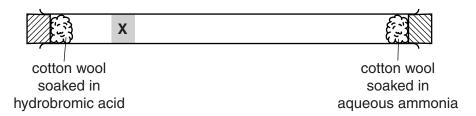

| (a) | Draw a labelled diagram to show the bonding in copper.   |     |
|-----|--|-----|
|     |  |     |
|     |  |     |
|     |  | [2] |
| (b) | Explain why metals are malleable.  | رک  |
|     |  |     |
|     |  |     |
| (c) | Copper corrodes slowly in damp air. One of the corrosion products has the formula CuCO <sub>3</sub> .Cu(OH) <sub>2</sub> . |     |
|     | (i) Calculate the percentage by mass of copper in this compound.   |     |
|     |  |     |
|     |  |     |
|     |  |     |
|     |  |     |
|     |  | [2] |
|     | (ii) How could you show that CuCO <sub>3</sub> .Cu(OH) <sub>2</sub> contains carbonate ions?                               |     |
|     |  |     |
|     |  | [2] |

(d) Copper is oxidised by concentrated sulfuric acid.

| This | s redox reaction can be represented by equations <b>A</b> and <b>B</b> .                       |
|------|--|
| Α    | $Cu \rightarrow Cu^{2+} + 2e^{-}$  |
| В    | $4H^+ + SO_4^{2-} + 2e^- \rightarrow 2H_2O + SO_2$   |
| Whi  | ich reaction, <b>A</b> or <b>B</b> , is oxidation and which is reduction? Explain your answer. |
|      |  |
|      |  |

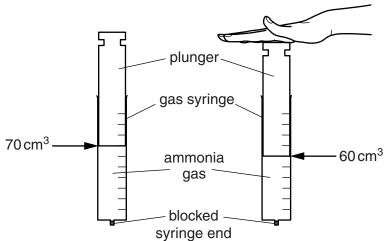

[Total: 10]

**A5** A student set up a tube as shown in the diagram.

Concentrated hydrobromic acid produces fumes of hydrogen bromide. Concentrated aqueous ammonia produces fumes of ammonia.

| (a) | After some time, solid ammonium bromide appeared on the walls of the tube at point ${\bf X}$ .  |
|-----|---|
|     | Use the kinetic particle theory to explain this result.   |
|     |   |
|     |   |
|     |   |
|     |   |
|     |   |
|     | [4  |
| (b) | A gas syringe is filled with 70 cm <sup>3</sup> of ammonia gas.  The pressure on the plunger is increased.  The temperature does not change but the volume in the syringe decreases to 60 cm <sup>3</sup> . |
|     |   |

| Use the kinetic particle theory to explain why the volume decreases. |     |
|--|-----|
|  |     |
|  |     |
|  | [1] |

[Total: 5]

| A6 |     | en 1 mole of sodium hydroxide reacts with excess hydrochloric acid, 57.1 kJ of energy eased.                  | is is |
|----|-----|---|-------|
|    |     | NaOH + HC $l \rightarrow$ NaC $l + H_2O$  |       |
|    | (a) | Calculate the energy released when 12.0 g of sodium hydroxide reacts with excellent hydrochloric acid.        | ∋SS   |
|    | (b) | Calculate the volume of $0.200\text{mol/dm}^3\text{HC}\text{\it l}$ which contains $2.19\text{g}$ of HC $l$ . | [2]   |
|    | (c) | Aqueous hydrochloric acid contains chloride ions.  Describe a test for chloride ions.  test                   | [2]   |
|    |     | result  | .[2]  |
|    | (d) | Zinc oxide reacts with both hydrochloric acid and sodium hydroxide.   |       |
|    |     | Which term describes this behaviour of zinc oxide?  |       |

[Total: 7]

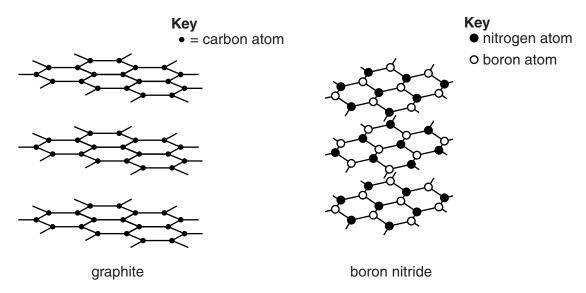

.....[1]

#### **Section B**

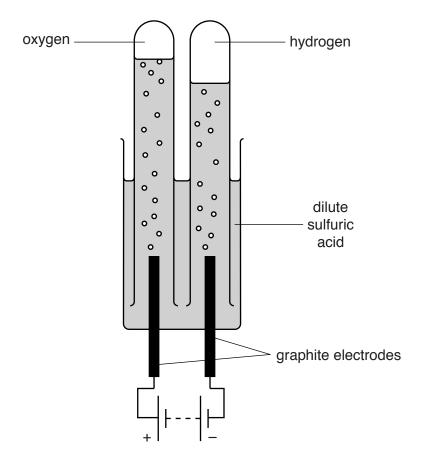

Answer three questions from this section in the spaces provided.

The total mark for this section is 30.

**B7** The structures of graphite and boron nitride are shown below.

(d) Dilute sulfuric acid can be electrolysed using graphite electrodes.

| (i | ) Grap | ohite is | a good | electrical | conductor. |
|----|--------|----------|--------|------------|------------|
|----|--------|----------|--------|------------|------------|

Explain why graphite conducts electricity.

| <br>[1 | IJ |
|--------|----|
|        |    |

(ii) Give another property of graphite that makes it useful as an electrode in this electrolysis.

- (e) During the electrolysis of dilute sulfuric acid, oxygen is released at the anode (positive electrode) and hydrogen is released at the cathode (negative electrode).
  - (i) Complete the equation for the reaction at the anode.

$$4OH^{-} \rightarrow O_{2} + \dots + \dots$$
 [1]

(ii) Construct the equation for the reaction at the cathode.

(iii) Explain why the volume of hydrogen produced is approximately double that of the oxygen.

$$\mathrm{Mg}(\mathrm{s}) \ + \ 2\mathrm{HC}\mathit{l}(\mathrm{aq}) \ \longrightarrow \ \mathrm{MgC}\mathit{l}_{2}(\mathrm{aq}) \ + \ \mathrm{H}_{2}(\mathrm{g})$$

(a) (i) Show by calculation which reactant is in excess.

|      |  | [3]  |
|------|--|------|
| (ii) | What would you observe in this reaction? |      |
|      |  | [41] |

**(b)** The graph shows how the volume of hydrogen gas produced, at room temperature and pressure, changes with time.

Calculate the total mass of hydrogen formed.

|     |      | mass of hydrogen = g [2]   |
|-----|------|--|
| (c) |      | e experiment is repeated at the same temperature and pressure. The same mass of gnesium is added but magnesium powder is used instead of small pieces. |
|     | The  | rate of reaction is faster. Explain why.   |
|     |      |  |
|     |      | [2]  |
| (d) | •    | gnesium reacts with nitrogen when heated. The ionic compound magnesium nitride, ${}_3{\rm N}_2$ , is formed.   |
|     | (i)  | Construct the equation, including state symbols, for this reaction.  |
|     |      | [1]  |
|     | (ii) | Deduce the charge on the nitride ion.  |

[Total: 10]

**B9** The structure of glycolic acid can be represented as shown.

units.

| (a) | Glyd | colic acid is a solid at room temperature.  |
|-----|------|---|
|     | Des  | cribe the arrangement and motion of the molecules in glycolic acid at room temperature.   |
|     | arra | ngement   |
|     | moti | on[2]   |
| (b) | Glyd | colic acid can polymerise with itself to form a polyester called poly(glycolic acid).     |
|     | (i)  | What type of polymer is a polyester?  |
|     |      | [1]   |
|     | (ii) | Draw a section of the polymer chain of poly(glycolic acid) showing at least two repeating |

[2]

| (c) | Glycolic acid is produced by heating methanal, carbon monoxide and water in the presence |
|-----|--|
|     | of a sulfuric acid catalyst.   |

| (i) | Α  | sample    | of   | 1800 g   | of   | methanal     | reacts   | with    | excess | carbon | monoxide | and | water |
