

## Cambridge Assessment International Education

Cambridge International General Certificate of Secondary Education

CANDIDATE NAME						
CENTRE NUMBER			ANDIDATE IUMBER			
CHEMISTRY					062	20/32

Paper 3 Theory (Core)

October/November 2019

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

## **READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

A copy of the Periodic Table is printed on page 16.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

This syllabus is regulated for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

- 1 This question is about solids, liquids and gases.
  - (a) The list gives the names of nine substances.

aqueous copper(II) sulfate
aqueous potassium manganate(VII)
aqueous sodium chloride
dilute hydrochloric acid
ethanol
hexene
mercury
octane
water

Answer the following questions about these substances. Each substance may be used once, more than once or not at all.

## State which substance:

(i)	is an alkane	
		[1]
(ii)	is used, when acidified, to test for sulfur dioxide	
		[1]
(iii)	turns blue litmus red	
		[1]
(iv)	reacts with sodium to produce only aqueous sodium hydroxide and hydrogen	
		[1]
(v)	is produced by the addition of steam to ethene.	
		[4]

**(b)** Some changes of state of mercury are shown.

	melting		evaporation	
solid	-	liguid	· •	mercury
mercury		mercury		gas
	Δ	,	R	J

(i)	State the names of the changes of state represented by <b>A</b> and <b>B</b> .
	A
	В
	[2]
(ii)	Use the kinetic particle model to describe the motion <b>and</b> separation of the particles in:
	liquid mercury
	mercury gas
	[4]

2 Biogas is made by fermenting animal and vegetable waste.

(a) The table shows the percentage composition of the gases present in a sample of biogas.

	percentage
substance present	present in biogas
carbon dioxide	
hydrogen	1.0
methane	61.5
nitrogen	8.5
water vapour	2.2
other substances	0.1
total	100.0

-	- 4	-
	11	ı
		л.

Deduce the percentage of carbon dioxide present in this sample of biogas.

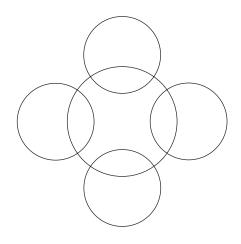

(b) (i) During the fermentation, carbon dioxide reacts with hydrogen to produce methane and water.

Complete the chemical equation for this reaction.

$$CO_2 + ....H_2 \rightarrow CH_4 + ....H_2O$$
 [2]

(ii) Methane and ethane are in the same homologous series.

(iii) Draw a dot-and-cross diagram to show the electron arrangement in a molecule of methane, CH<sub>4</sub>. Show outer shell electrons only.

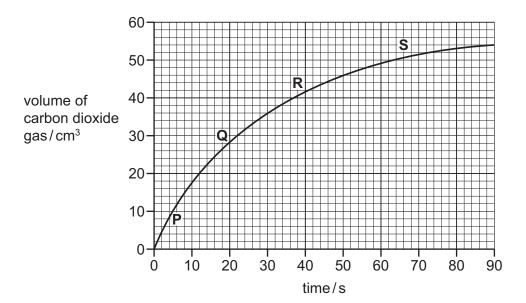

(c)	Helium and hydrogen can both be used to fill balloons.	
	Suggest <b>one</b> advantage of using helium rather than hydrogen to fill balloons.	11
(d)	The biogas fermentation mixture contains a small amount of compound <b>C</b> .	'.
	The structure of compound <b>C</b> is shown.	
	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	
	(i) On the structure shown, draw a circle around a functional group which reacts wit aqueous bromine.	:h 1]
	(ii) How many different types of atoms are present in compound C?	
	[	1]
(e)	Ethanol is produced by fermentation of a mixture of plant sugars.	
	Describe how ethanol can be separated from the rest of the fermentation mixture by fractional distillation.  In your answer:	al
	<ul> <li>describe how to do the fractional distillation</li> <li>explain how ethanol is separated from the rest of the fermentation mixture using fractions distillation.</li> </ul>	al

	[4	ł]

[Total: 14]

3 (a) A student investigated the reaction of calcium carbonate with an excess of dilute hydrochloric acid by measuring the volume of carbon dioxide produced at 10 second intervals.

$$CaCO_3 + 2HCl \rightarrow CaCl_2 + CO_2 + H_2O$$

The results are shown on the graph.

(i) Ho	ow long did it t	ake from the sta	rt of the ex	periment to	collect 30 cm <sup>3</sup>	of carbon did	oxide?
--------	------------------	------------------	--------------	-------------	----------------------------	---------------	--------

																												s		[1	١.	ı
--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	---	--	----	----	---

(ii) At which point on the graph, **P**, **Q**, **R** or **S**, was the rate of reaction fastest? Use the graph to explain your answer.

[2]

(iii) When 0.225 g of calcium carbonate is used, 54.0 cm<sup>3</sup> of carbon dioxide is formed.

Determine the mass of calcium carbonate needed to form 216 cm<sup>3</sup> of carbon dioxide.

mass of calcium carbonate = ...... g [1]

(iv)	What effect do the following have on the rate of this reaction?	
	<ul> <li>Increasing the temperature of the reaction mixture.</li> <li>All other conditions are kept the same.</li> </ul>	
	Using larger pieces of calcium carbonate.     All other conditions are kept the same.	
		[2]
<b>(b)</b> In	industry, calcium oxide is made from calcium carbonate by thermal decomposition.	
	$CaCO_3 \xrightarrow{heat} CaO + CO_2$	
(i)	Why is this described as thermal decomposition?	
		. [2]
(ii)	State <b>one</b> other use of calcium carbonate in industry.	
		. [1]
(iii)	Calcium oxide is used to treat acidic industrial waste.	
	State the type of chemical reaction that occurs.	
		. [1]
	[Total	: 10]

- **5** This question is about the halogens and compounds of the halogens.
  - (a) The properties of some halogens are shown in the table.

element	melting point in °C	boiling point in °C	density of liquid at boiling point in g/cm³	colour
fluorine	-220	-188	1.51	
chlorine	-101		1.56	light green
bromine	-7	59	3.12	red-brown
iodine	114	184		grey-black

(i)	Coi	mplete the table to estimate:		
		the boiling point of chlorine the density of iodine.		

(ii)	Describe the trend in the melting points of the halogens down the group.	
		[1]
(iii)	Predict the physical state of bromine at –20 °C.	- 4 -
		[1]
(iv)	Which <b>one</b> of the following is most likely to be the colour of fluorine? Tick <b>one</b> box.	
	dark green	
	light grey-black	
	light yellow	
	purple	[1]
		Γ.1

[2]

( <b>b)</b> Chl	orine re	acts w	ith an aqueou	ıs potas	sium s	salt to form iodir	ne and	l a differen	t potassium	n salt.
(i)	Comple	ete the	e word equation	on for th	is rea	ction.				
chl	orine	+			$\bigg] \hspace{0.2cm} \rightarrow \hspace{0.2cm}$	iodine	+			
										[2]
(ii)	When a	aqueo	us sodium flu	oride is	added	I to chlorine, no	reacti	on occurs.		
	Explair	n, usin	g ideas about	the rea	ctivity	of the halogens	, why	no reactio	n occurs.	
										[1]
(iii)	State c	ne us	e of chlorine.							
										[1]
( <b>c)</b> Aqı	ueous si	lver ni	trate is used t	o test fo	r chlo	ride ions and io	dide id	ons.		
(i)	The so	lutions	s are first acid	ified wit	h dilut	e nitric acid.				
	Explair	n why	dilute hydroch	nloric ac	id is <b>n</b>	ot used to acidi	fy the	solutions.		
										[1]
(ii)	Comple	ete the	e table to show	w the ex	pecte	d observations.				
			ion			servations on acqueous silver nit				
		chlor	ride (C <i>l</i> -)							
		iod	ide (I <sup>-</sup> )							
										[3]

(d) A compound of chlorine has the formula  $C_6H_4Cl_2$ .

Complete the table to calculate the relative molecular mass of  $\rm C_6H_4C\it l_2$ . Use your Periodic Table to help you.

type of atom	number of atoms	relative atomic mass	
carbon	6	12	6 × 12 = 72
hydrogen			
chlorine			

relative	molecul	lar mas	s =	 	
					[2]
