Paper 3 Geographical Investigations

October/November 2021

1 hour 30 minutes

You must answer on the question paper.

You will need: Insert (enclosed)

Ruler

Calculator Protractor

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined pages at the end of this booklet; the question number or numbers must be clearly shown.

INFORMATION

- The total mark for this paper is 60.
- The number of marks for each question or part question is shown in brackets [].
- The insert contains additional resources referred to in the questions.

(a)	_	1.1 (Ins 2018.	sert) shows the number of international touris	ts who visited	Malta between 2008
	(i)	In whic	h year was the highest number of tourists me	asured at 250 (000?
					[1]
	(ii)		one of the following is the correct descriptio 18? Tick (✓) your answer.	n of tourist nu	mbers between 2008
				tick (√)	
			The number of tourists decreases.		
			The number of tourists increases.		
			The number of tourists does not change.		
	(i)	Describ	pe the variation during the year. Use statistics		
					[3]
	(ii)	Sugges the year	st two reasons why the number of internationa or.	ıl tourists visitir	ng Malta varies during
		1			
		2			
					[2]

The students decided to test the following hypotheses:

Hypothesis 1: More tourists to Malta come from the UK than from any other country.

Hypothesis 2: Tourists from different countries visit Malta for different reasons.

(c)	To	investigate	their	hypotheses	the	students	produced	а	questionnaire.	This	is	shown	in
	Fig	j. 1.3 (Insert).										

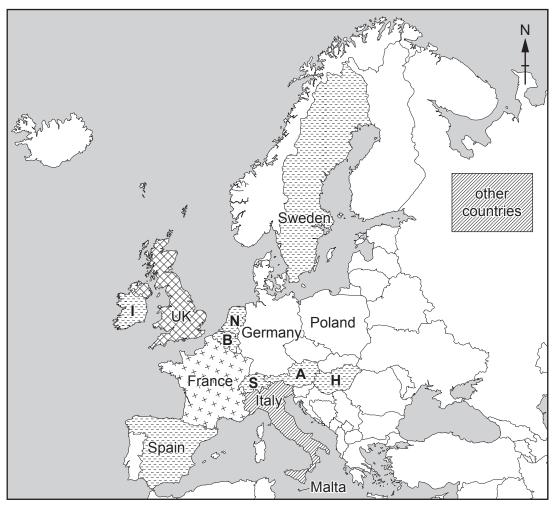

Name a sampling questionnaire.	method which the students could have used to get their answe	rs to the
Describe this sam	pling method.	

(d) The results of Question 2 (Which country have you come from?) are shown in Table 1.1 (Insert).

(i) Plot the data for Germany and Poland on Fig. 1.4 below.

[2]

Countries that tourists to Malta come from

Key

Switzerland

Fig. 1.4

1–10

(ii)	What conclusion would the students make to Hypothesis 1 : <i>More tourists to Malta come from the UK than from any other country</i> ? Support your decision with evidence from Fig. 1.4 and Table 1.1.
	[3]

- (e) To investigate **Hypothesis 2** students used their answers to Question 3 (What is the main reason for your visit to Malta?) for the four countries from which most tourists came. These results are shown in Table 1.2 (Insert).
 - (i) Use the data in Table 1.2 to **complete the pie graph** for the UK in Fig. 1.5 below. [3]

Answers to Question 3 (What is the main reason for your visit to Malta?)

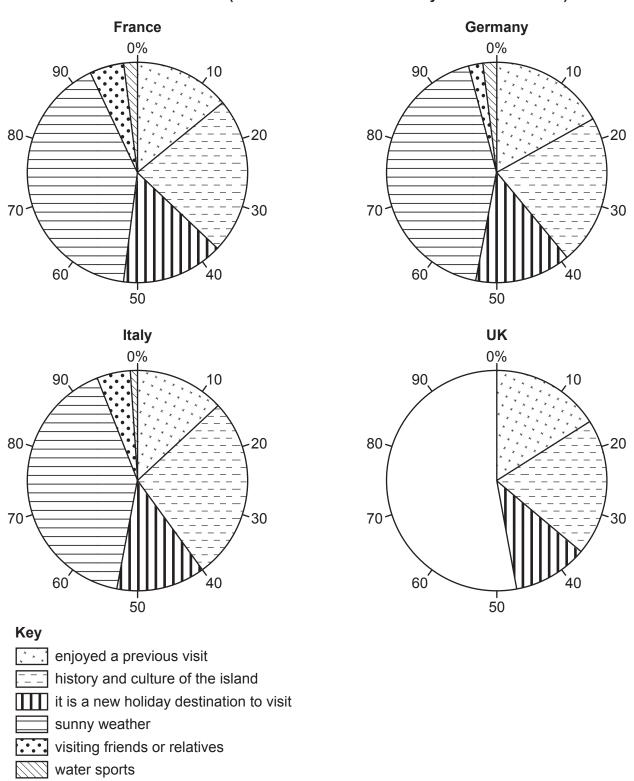

Fig. 1.5

(11)	countries visit Malta for different reasons? Support your conclusion with evidence from Fig. 1.5 and Table 1.2.
	[4]

- (f) The results of Question 4 in the questionnaire (Which one of the following most influenced your choice of Malta for your holiday?) are shown in Table 1.3 (Insert).
 - (i) Use these results to complete Fig. 1.6 below.

[2]

Answers to Question 4 (Which one of the following most influenced your choice of Malta for your holiday?)

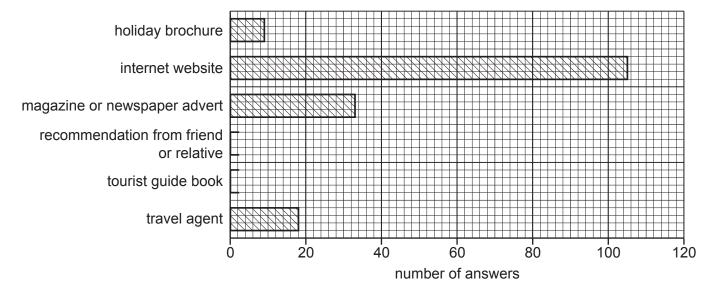

Fig. 1.6

	(ii)	Suggest how the Malta Tourism Authority could use the information in Fig. 1.6 and Table 1.3 to increase the number of tourists visiting Malta.
		[2]
(g)	Des Malt	cribe two likely benefits and two likely disadvantages of tourism for the local people in a.
	Ben	efits
	1	
	2	
	Disa	advantages
	1	
	2	
		[4]
		[Total: 30]

- 2 Students in Wisconsin, USA, took part in a community project to test if the local river was becoming less polluted. To investigate this they did fieldwork on the Trade River. Before they started their fieldwork, their teacher warned them about the dangers of working in the river.
 - (a) In the table below suggest different precautions that the students might take to protect themselves while doing tests in the water.

possible danger	precaution to protect students
infection from the water	
insects or animals in the river	
sharp stones on the river bed	

[3]

The students investigated two hypotheses.

Hypothesis 1: The oxygen level in the river was higher in 2018 than in 2015.

Oxygen is essential for animals to live in rivers. The oxygen level of water increases as it becomes less polluted.

Hypothesis 2: The Biotic Index increased between 2015 and 2018.

The Biotic Index is a way of measuring water pollution by looking at the animals that live in the river.

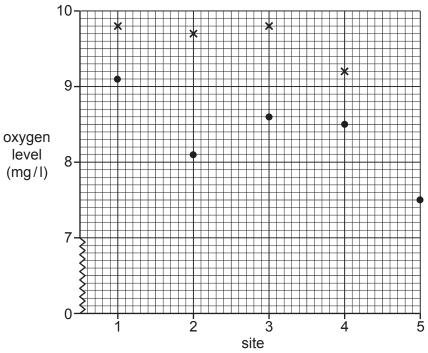

- **(b)** The students used a digital meter to measure the oxygen level of the water. This meter and a student using the meter are shown in Fig. 2.1 (Insert).
 - (i) Describe **two** ways that the students could make sure that their measurements were reliable.

1	 	 	 	
2				
	 	 	 	 [2]

(ii) The students measured the oxygen level of the water at five sites along the Trade River. These sites had previously been measured by community volunteers in 2015. The results of measurements taken in 2015 and 2018 are shown in Table 2.1 (Insert).

Plot the oxygen level at site 5 in 2018 in Fig. 2.2 below. [1]

Results of oxygen level measurements

Key

- oxygen level results in 2015
- × oxygen level results in 2018

Fig. 2.2

(111)	the river was higher in 2018 than in 2015? Use evidence from Fig. 2.2 and Table 2.1 to support your decision.
	[3

(c)		investigate Hypothesis 2: The Biotic Index increased between 2015 and 2018, the lents did the investigation described in Fig. 2.3 (Insert) at the five sites along the river.
	(i)	Before the students began working at the five fieldwork sites, they did a pilot study on the Trade River near their school. Explain what a pilot study is and give one reason for doing a pilot study.
		[2]
	(ii)	Use Fig. 2.3 to explain why the students disturbed the river bed when carrying out the fieldwork.
		[1]
	(iii)	Use Fig. 2.3 to explain why the students needed to identify the different types of animals found at each site while sampling.
		[1]

(d)	To calculate a Biotic Index score for each site the students used the following method. An
	example of their recording sheet at site 2 is shown in Fig. 2.4 (Insert).

- 1 On the recording sheet circle each animal that matches those found in the sample.
- 2 Count the number of animals that are circled in each group and write the number in the box. Only count the number of types of animals.
- 3 Multiply the number of animals identified in each group by the group value.
- 4 Repeat this for all groups of animals.

((i)	Which	biotic	group	contains	the	sowbug?

.....

[1]

The Biotic Index calculation for site 2 in Fig. 2.4 is shown below.

Number of animals circled in group 1×9 group value 1×4

 $1 \times 4 = 4$

Number of animals circled in group $2 \times group$ value

 $5 \times 3 = 15$

Number of animals circled in group $3 \times \text{group value}$

 $1 \times 2 = 2$

Number of animals circled in group $4 \times \text{group value}$

 $1 \times 1 = 1$

Total number of animals = 8

Total value = 22

Biotic Index score = Total value

Total number of animals 8

(ii) The recording sheet for the site of the students' pilot study is shown in Fig. 2.5 opposite. **Complete this recording sheet** by putting in the number of animals identified in group 2.

[1]

(iii) Calculate the Biotic Index score for the pilot study site below.

[2]

Number of animals circled in group 1 x group value =

Number of animals circled in group $2 \times \text{group value} =$

Number of animals circled in group $3 \times \text{group value} =$

Number of animals circled in group $4 \times \text{group value} =$

Total number of animals =

Total value =

Biotic Index score = Total value =

Total number of animals

Biotic Index Recording Sheet

Trade River site number PILOT

Group 1: These do not live in polluted water. Circle each animal found.

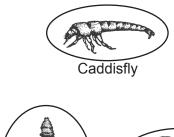

No. of group 1 animals circled:

3

Group Value = 4

Group 2: These can live in water which is slightly polluted. Circle each animal found.

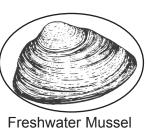

Penny

No. of group 2 animals circled:

Crane Fly

Riffle Beetle

Group Value = 3

Group 3: These can tolerate more polluted water. Circle each animal found.

No. of group 3 animals circled:

Group Value = 2

Group 4: These can live in polluted water. Circle each animal found.

Bloodworm Midge

No. of group 4 animals circled:

Group Value = 1
