CHEMISTRY

5070/23

Paper 2 Theory

May/June 2010

1 hour 30 minutes

Candidates answer on the Question Paper.

No additional materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Section A

Answer all questions.

Write your answers in the spaces provided in the Question Paper.

Section B

Answer any three questions.

Write your answers in the spaces provided in the Question Paper.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use				
Section A

В9				
B10				
Total				

This document consists of 17 printed pages and 3 blank pages.

[Total: 6]

Answer **all** the questions in this section in the spaces provided.

The total mark for this section is 45.

A1 (Choose from	the following	compounds to	o answer the	questions below.
------	-------------	---------------	--------------	--------------	------------------

BaSO $_4$ CH_4 C_2H_4 C_3H_8 CO_2 $CaCO_3$ CF_3C1 $K_2Cr_2O_7$ $MgSO_4$ NaC1 $ZnSO_4$

Each compound can be used once, more than once or not at all.

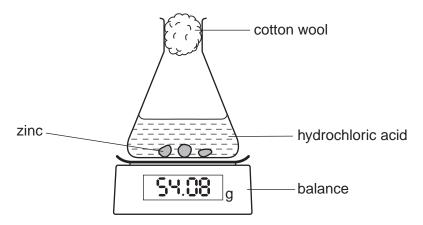

Which compound

(a)	is responsible for ozone depletion,	
		[1]
(b)	is formed by the bacterial decay of vegetable matter,	
		[1]
(c)	is used to remove sulfur dioxide in flue gas desulfurisation,	
		[1]
(d)	is an insoluble salt,	
		[1]
(e)	is orange in colour,	
		[1]
(f)	decolourises aqueous bromine?	
		[1]

42		um, sodium and potassium are elemen nother element in Group I.	its in Group I of the Periodic Table. Francium, Fr,	For Examiner's Use
	(a)	How many electrons are in there in the	outer shell of a francium atom?	
			[1]	
	(b)	Complete the following table about an a	atom of francium.	
	()			
		mass number	223	
		proton (atomic) number		
		number of protons		
		number of electrons		
		number of neutrons		
			[2]	
	(c)	Predict two physical properties of franc	cium.	
	` ,			
		1		
		2	[2]	
	(d)	A scientist predicts that francium reacts Write the equation for this reaction.	s violently with water.	
		Time the equation for this reasons.		
			[1]	
			[Total: 6]	

A3 The diagram below shows apparatus that can be used to investigate the rate of reaction between zinc and hydrochloric acid.

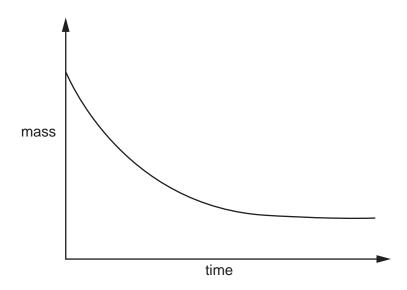

For Examiner's Use

(a) Write the equation, including state symbols, for the reaction between zinc and hydrochloric acid.

[2]

(b) The graph shows the change in mass that occurs during the reaction between zinc and hydrochloric acid.

(i) Explain why the mass decreases during the course of the reaction.

______[′

(ii) Exactly the same experiment was repeated but with a catalyst added.

Sketch on the graph the results that would be obtained in the presence of the catalyst.

[2]

(c)	Explain why zinc reacts more slowly with dilute hydrochloric acid than with concentrated hydrochloric acid.	For Examiner's Use
	[2]	
(d)	Explain why hydrochloric acid reacts much faster with zinc powder than with lumps of zinc.	
	[2]	
(e)	Zinc is added to excess hydrochloric acid. Aqueous sodium hydroxide is added drop by drop to this reaction mixture until it is in excess. Describe what you would observe.	
	[2]	
	[Total: 11]	

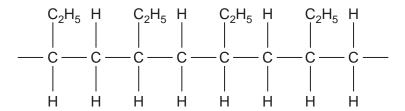

(a)	Graphite and diamond electricity but diamond	d are both forms of solid car d does not.	bon. Explain why graphite c	conducts
				[2]
b)	Explain why solid sodi chloride does conduct	um chloride does not conduct electricity.	t electricity whereas aqueous	sodium
				[2]
				[2]
(c)	Complete the following	g table about electrolysis usir		[∠]
(c)	Complete the following			
		g table about electrolysis usir	ng inert graphite electrodes.	
	electrolyte molten lead(II)	g table about electrolysis usir	ng inert graphite electrodes.	
	electrolyte molten lead(II) bromide aqueous copper(II)	g table about electrolysis usin	ng inert graphite electrodes.	
	electrolyte molten lead(II) bromide aqueous copper(II) sulfate	g table about electrolysis usin	product at anode	[3]
1 1 3	electrolyte molten lead(II) bromide aqueous copper(II) sulfate dilute sulfuric acid	g table about electrolysis usin	product at anode	
1 1 3	electrolyte molten lead(II) bromide aqueous copper(II) sulfate dilute sulfuric acid Describe one commer	product at cathode copper	product at anode oxygen	[3]
1 1 3	electrolyte molten lead(II) bromide aqueous copper(II) sulfate dilute sulfuric acid Describe one commer use	product at cathode copper	product at anode oxygen	[3]
1 1 3	electrolyte molten lead(II) bromide aqueous copper(II) sulfate dilute sulfuric acid Describe one commer use	product at cathode copper	product at anode oxygen	[3]
1 1 3	electrolyte molten lead(II) bromide aqueous copper(II) sulfate dilute sulfuric acid Describe one commer use	product at cathode copper	product at anode oxygen	[3]

A5 Ethanol, C₂H₅OH, can be manufactured by two different processes. process 1 - the catalysed addition of steam to ethene process 2 – the fermentation of glucose (a) Name the type of reaction used to manufacture **ethene**. **(b) (i)** Write the equation for process **1**. [1] Suggest the name of the alcohol made when the alkene C₃H₆ reacts with steam in the presence of a catalyst.[1] (c) The equation for process 2 is shown below. $C_6H_{12}O_6(aq) \rightarrow 2C_2H_5OH(aq) + 2CO_2(g)$ Describe **two** essential conditions required for efficient fermentation.[2] Suggest one advantage of manufacturing ethanol by process 2 rather than by process 1.[1] (d) Process 2 makes an aqueous solution of ethanol. Suggest a method of purification that can be used to remove water from the aqueous ethanol. (e) Describe a chemical test which could be used to positively identify the carbon dioxide formed during fermentation. [Total: 8]

A6 Plastics are made of macromolecules called polymers. In the middle of the Pacific Ocean there is a huge area of water that is contaminated with small bits of plastics. The waste plastics have been washed away from coastlines.

For Examiner's Use

(a) Part of the structure of one of the polymers found in the ocean is shown below.

(i) Name thi	s type of	polymer.
--------------	-----------	----------

F 4 '	1
11	
 11	ı

(ii) Draw the structure of the monomer used in the manufacture of this polymer.

((iii)	Explain why this polymer is described as a saturated hydrocarbon.	[1]
(b)	Sug	gest why this polymer is not destroyed in water.	[1]

[Total: 4]

BLANK PAGE

Section B

For Examiner's Use

Answer three questions from this section in the spaces provided.

The total mark for this section is 30.

В7		razine, N_2H_4 , is a liquid that has been used as a rocket fuel. It reacts with oxygen as wn in the equation.
		$N_2H_4 + O_2 \rightarrow N_2 + 2H_2O$
	This	reaction is highly exothermic.
	(a)	Suggest why the combustion of hydrazine has very little environmental impact.
		[1]
	(b)	Explain, in terms of the energy changes which occur during bond breaking and bond forming, why the combustion of hydrazine is exothermic.

(c) (i) Calculate the volume of oxygen, measured at room temperature and pressure, needed to completely combust 1.00 tonne of hydrazine. [One tonne is 10⁶ grams. One mole of any gas at room temperature and pressure occupies a volume of 24 dm³.]

......[2]

volume of oxygen =		dm ³	[3]
--------------------	--	-----------------	-----

(ii) A rocket burns hydrazine in an atmosphere of oxygen. Both hydrazine and oxygen are stored in the rocket as liquids. Suggest why oxygen is stored as a liquid rather than as a gas.

.....[1]

u)	пус	arazine, N ₂ n ₄ , nas similar chemical properties to ammonia.	For Examiner's
	(i)	Hydrazine reacts with hydrochloric acid. Suggest the formula of the product of this reaction.	Use Use
		[1]	
	(ii)	Hydrazine is a covalent compound. Draw a 'dot-and-cross' diagram for hydrazine.	

[2]

[Total: 10]

B8 An ester is made from a carboxylic acid and an alcohol.

For
Examiner's
1100

The carboxylic acid has the molecular formula $C_4H_8O_2$. Analysis of the alcohol shows it has the following percentage composition by mass: 52.2% carbon; 13.0% hydrogen; 34.8% oxygen.

(a)	(i)	Suggest a possible name for the carboxylic acid.	
	(ii)	Draw a possible structure for the carboxylic acid.	[1]
			[1]
	(iii)	What is the empirical formula for the carboxylic acid?	[1]
(b)	Cal	Iculate the empirical formula for the alcohol.	[1]
(c)	(i)	Name the ester formed when ethanol reacts with ethanoic acid.	[2]
	(ii)	Suggest one commercial use of this ester.	[1]
			[1]

(d)	Tery	vlene is a polyester used to make clothing materials.	For
	(i)	Draw the partial structure of <i>Terylene</i> . Include all the atoms and all the bonds in the ester linkage.	Examiner's Use
		[2]	
	(ii)	Which type of natural macromolecule contains the ester linkage?	
		[1]	
		[Total: 10]	

B9		rogen and iodine react together to form hydrogen iodide in a reversible redox reaction. forward reaction is endothermic.
		$H_2(g) + I_2(g) \rightleftharpoons 2HI(g)$ $\Delta H = +53 \text{ kJ mol}^{-1}$
	Hyd	rogen and hydrogen iodide are colourless gases whereas iodine gas is purple.
	(a)	What is meant by the term redox reaction?
		[1]
	(b)	A mixture of $H_2(g)$, $I_2(g)$ and $HI(g)$ are in dynamic equilibrium at a pressure of 2 atmospheres and 200 °C.
		The temperature of the mixture is increased to 500 °C but the pressure remains unchanged. Explain why the mixture becomes less purple in colour.
		[3]
	(c)	Calculate the maximum mass of hydrogen iodide that can be made from $45.3\mathrm{g}$ of hydrogen.
		maximum mass of hydrogen iodide = g [3]

(d)	Hyd	lrogen iodide is dissolved in water to make solution X .	Fo
	(i)	X is acidified with dilute nitric acid and then aqueous lead(II) nitrate is added. A yellow precipitate is formed.	Exami Us
		Write an ionic equation, including state symbols, for this reaction.	
		[2]	
	(ii)	A small volume of acidified potassium manganate(VII) is added to X . The solution changes colour to orange-brown. From this description what can you deduce about the chemical properties of X ?	
		[1]	
		[Total: 10]	

B10			rs are used to promote plant growth and increase crop yield. rtilisers are potassium chloride, potassium nitrate and ammonium phosphate.
	(a)		assium nitrate is a soluble salt that can be prepared by reaction between an acid and alkali.
		(i)	Write an equation for the reaction of an acid with an alkali to prepare potassium chloride.
			[1]
		(ii)	Describe the essential experimental details of this preparation of solid potassium chloride.
			[2]
	(b)	Amr	monium phosphate is an ionic compound containing the phosphate ion, PO ₄ ³⁻ .
		(i)	Write the formula for ammonium phosphate.
		(ii)	Calculate the percentage by mass of nitrogen in ammonium phosphate.

% by mass = [2]

(c)		armer adds excess calcium hydroxide to react with hydrogen ions in acidic soils. He hadds fertiliser to increase the nitrogen content of the soil.
	(i)	Write an ionic equation to show the neutralisation of hydrogen ions by solid calcium hydroxide.
		[1]
	(ii)	Suggest why the farmer should use potassium nitrate rather than ammonium phosphate to increase the nitrogen content of the soil.
		[1]
(d)		cientist believes a water sample is contaminated by potassium nitrate.
		[2]
		[Total: 10]
