Paper 2

October/November 2018

2 hours 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 24.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

I			odium hydrogencarbonate is heated, it decomposes to produce sodium carbonate, woon dioxide.	ater
	The	equ	ation for the reaction is	
			$2NaHCO_3$ \longrightarrow Na_2CO_3 + CO_2 + H_2O .	
	[<i>A</i> _r :	H, 1	; C, 12; O, 16; Na, 23]	
	The	e rela	tive molecular mass of sodium hydrogencarbonate is 84.	
	(a)	(i)	Calculate the relative molecular mass of sodium carbonate.	
				[1]
		(ii)	Complete the following sentences.	
			84g of sodium hydrogencarbonate produces g of sodium carbonate and	
			g of water.	
			4.2g of sodium hydrogencarbonate produces g of sodium carbonate.	[3]
	(b)	Sta	te a test and the result of the test that show that carbon dioxide is produced.	
		test		
		resi	ult	[2]

[Total: 6]

2 (a) Muscle cells normally respire aerobically.

During strenuous exercise, muscle cells also respire anaerobically.

Complete Table 2.1 to compare aerobic and anaerobic respiration in muscle cells.

Write a tick (\mathcal{I}) to show a correct statement and a cross (\mathcal{I}) to show a statement that is not correct.

Two rows have been completed for you.

Table 2.1

statement	aerobic respiration	anaerobic respiration
oxygen is used	✓	×
glucose is used	✓	✓
carbon dioxide is produced		
water is produced		
lactic acid is produced		
a relatively large amount of energy is released		

(b)	Describe respiration	oxygen	in	atmospheric	air	reaches	muscle	cells	to	be	used	in	aerobic
		 									• • • • • • • • • • • • • • • • • • • •

[4]

3 A circuit containing two different resistors connected to a power source is shown in Fig. 3.1.

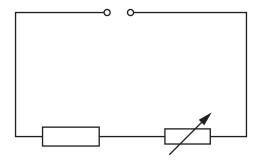

Fig. 3.1

(a)	Two types of meters are	e connected	in the	circuit s	so that	the	resistance	of the	fixed	resistor
	may be calculated.									

State the names of the types of meters that must be used.

...... and [2]

(b) The meter used to measure the potential difference V_1 across the fixed resistor is shown in Fig. 3.2.

The meter used to measure the potential difference V_2 across the variable resistor is shown in Fig. 3.3.

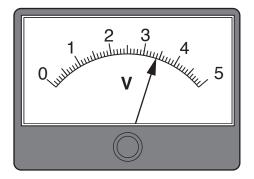

Fig. 3.2

Fig. 3.3

(i) The current in the circuit is 0.08A.

Calculate the resistance of the fixed resistor. State the unit.

(ii)	Determine the total potential difference <i>V</i> supplied by the source.
	Show your working.
	V = V [2]
	[Total: 7]

4 Some reactions of nitric acid are shown in Fig. 4.1.

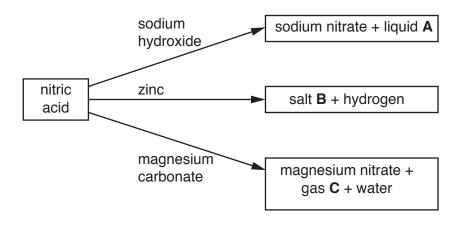

Fig. 4.1

(a)	Identify liquid A , salt B and gas C .	
	liquid A	
	salt B	
	gas C	3]
(b)	Nitric acid is titrated with aqueous sodium hydroxide, using Universal Indicator as the indicator.	ıe
	Complete the sentences about the titration.	
	The nitric acid is added to the sodium hydroxide using a until	
	Universal Indicator turns green, which shows that the solution is	
	The temperature of the solution increases because the reaction is	3]
(c)	The formula of a magnesium ion is ${\rm Mg^{2+}}$ and the formula of a nitrate ion is ${\rm NO_3}^-$.	
	Deduce the formula of magnesium nitrate.	
	[1]
	[Total:	7]

Question 5 starts over the page.

5 AAA cells are used in small electrical devices.

Fig. 5.1 shows a ruler, marked with 1 mm divisions, being used to measure the length of a used AAA cell.

A line **P** marks the position of one end of the AAA cell against the scale on the ruler.

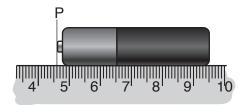

Fig. 5.1

- (a) (i) On Fig. 5.1 draw a line, labelled **Q**, to show the position of the other end of the AAA cell against the scale on the ruler. [1]
 - (ii) Use the scale on the ruler in Fig. 5.1 to determine the length l in mm of the AAA cell.

l =mm [1]

(iii) The diameter *d* of the AAA cell is shown in Fig. 5.2.

Fig. 5.2 (not to scale)

The ratio of the diameter d of the cell to the length l of the cell is 2 : 9.

Calculate the diameter *d* of the cell.

d =mm [1]

(b)	(i)	Describe how a measuring cylinder and water are used to determine the volume of a used AAA cell.
		[1]
	(ii)	The volume of the AAA cell is 4.40 cm ³ .
		The density of the cell is 3.16 g/cm ³ .
		Calculate the mass <i>m</i> of the cell.

 $m = \dots g[2]$

[Total: 6]

6	(a)	The word	equation for	or photosy	nthesis is
U	(a)	THE WOLG	Equation	ui pilutus,	/1111110010 10

carbon dioxide + water ------ glucose + oxygen.

This reaction will only take place in the presence of light and chlorophyll.

Explain the role of light and the role of chlorophyll in photosynthesis.

light	 	 	 	
Ü				
chlorophyll	 	 	 	
I- y				

[2]

(b) In an investigation, a green plant is placed in bright light with a supply of carbon dioxide and water.

The rate of photosynthesis is measured at different temperatures.

The results are shown in Fig. 6.1.

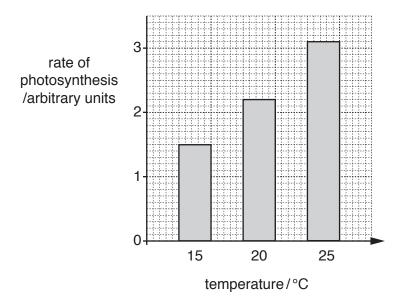

Fig. 6.1

(i)	Describe	the	trend	shown	in	Fig.	6.1
-----	----------	-----	-------	-------	----	------	-----

Suggest an explanation for your answer.	

	(ii)	Predict what happens to the rate of photosynthesis at 45 °C.	
		Give a reason for your answer.	
		prediction	
		reason	
	_		[2]
(c)	Exp	plain why all animal life depends on plants carrying out photosynthesis.	
			[2]
		רן	Total: 8]

Pet	roleu	ım is separated into fractions by fractional distillation.	
(a)	Nar	me the fraction that is used for	
	mal	king roads,	
	airc	eraft fuel.	[2]
(b)	Нер	otane is a hydrocarbon obtained from petroleum.	[<u>~</u> .
	Sta	te what is meant by the term <i>hydrocarbon</i> .	
			[2]
(c)	Hep	otane is broken down into other substances by cracking.	
	Dur	ring this process, heptane forms two compounds X and Y and hydrogen.	
	The	e equation for the reaction is	
		C_7H_{16} \longrightarrow $2X + Y + H_2$	
		h ${\bf X}$ and ${\bf Y}$ change the colour of bromine water from brown to colourless. A molecule stains two carbon atoms.	of X
	(i)	Deduce the molecular formula of X and of Y .	
		X	
		Υ	[0]
			[2]
	(ii)	Name the homologous series to which X and Y belong.	
			[1]
		lTota	ıl. 7

8 The inside of an electrical plug is shown in Fig. 8.1.

	Fig. 8.1	
(a)	On Fig. 8.1 draw a line to identify the live wire. Label the line L .	[1]
(b)	Wire B is the earth wire. Explain the function of the earth wire.	
		[2]
(c)	When plugged into a socket, the plug supplies mains electricity at 230 V to a washin machine.	ng
	The current in the appliance is 9.6A.	
	Calculate the power <i>P</i> produced in the washing machine.	
	<i>P</i> = W [[2]

[Total: 6]

10 Table 10.1 shows the arrangement of electrons in atoms of five different elements A, B, C, D and E.

The letters are **not** the chemical symbols of the elements.

Table 10.1

element	Α	В	С	D	E
electronic structure	2,1	2,8,5	2,6	2,8,7	2,8,2

Use the letters in Table 10.1 to complete the following sentences.

Each letter may be used once, more than once or not at all.

(a)	The element with the proton number 15 is	[1]
(b)	The element with the nucleon number 35 which has an isotope containing 18 neutrons is	
		[1]
(c)	The two non-metallic elements in the same period of the Periodic Table are	
	and	[1]
(d)	An element that forms an ionic compound with fluorine is	[1]
(e)	The element that gains two electrons to form an ion is	[1]

[Total: 5]

11 Fig. 11.1 shows a lens A and plane mirror B.

A ray of light **R** is incident on lens **A**.

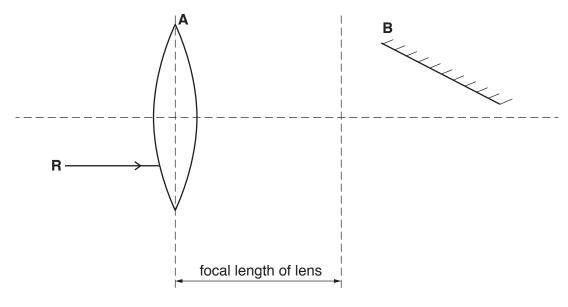

Fig. 11.1

(a) Ray R passes through the lens and is reflected from the mirror.

On Fig. 11.1, draw the path of ray R.

[3]

(b) Fig. 11.2 is a simplified diagram showing the range of wavelengths for some colours in the visible spectrum.

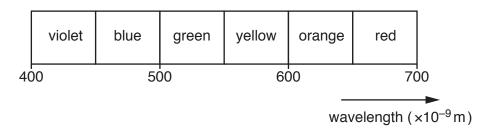

Fig. 11.2

(i) Estimate the range of wavelengths of orange light.

(ii) State the speed of light in a vacuum.

..... m/s [1]

(iii) Calculate the highest **frequency** of orange light.

frequency = Hz [3]

13	Lith	ium,	sodium and potassium are elements in Group I of the Periodic Table.
	Gro	up I	elements are called the alkali metals.
	(a)	Sta	te how the melting points of the elements change as the group is descended.
			[1]
	(b)	Sug	gest why the Group I elements are called the alkali metals.
			[1]
	(c)	(i)	Each of the elements in Group I reacts with chlorine to form an ionic metal chloride.
			Write a balanced symbol equation for the reaction of chlorine with potassium.
			[1]
		(ii)	State how the reactivity of lithium differs from that of potassium.
			[1]
		(iii)	State one way in which the properties of potassium chloride differ from the properties of a covalent compound.
			[1]
			[Total: 5]

Question 14 starts over the page.

14 A thin strip of metal **X** is firmly fixed to a thin strip of metal **Y**. This is called a bimetallic strip.

Fig. 14.1 shows the effect of heat on the bimetallic strip.

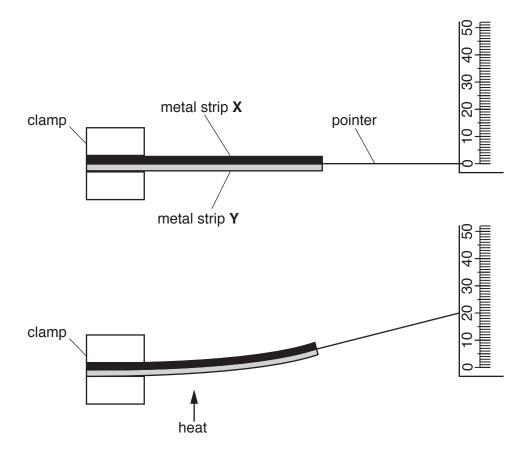

Fig. 14.1

The bimetallic strip is heated and the pointer moves along a millimetre scale.

(a) Draw a circle around the physical property of the metal strips that changes to cause the movement of the pointer when the bimetallic strip is heated.

colour e.m.f. mass resistance volume [1]

(b) On Fig. 14.2, sketch a graph to show the relationship between the temperature of the bimetallic strip and the position of the pointer on the scale.

Label the axes of the graph and state the unit for each axis.

Fig. 14.2

[3]

(c) In a second experiment a load of 3.0 N is fixed to the end of the pointer.

The heating of the metal strips is repeated and the load rises 0.02 m in 18.0 s.

Calculate the work done *W* by the metal strips on the load. State the unit.

	_	
W =	unit	[3]
